

'VETTE BODY DOLLY- Universal Base (1953-1972)

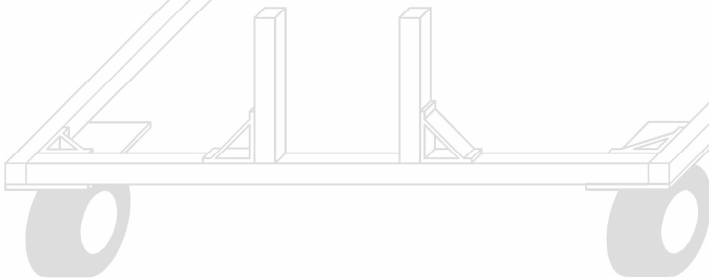

The NuAir 'Vette Body Dolly is a far superior solution to the traditional wood framed dolly approach. Lighter and Easier to store than any Steel Framed design. Why trust your treasured car with anything else?

Consider these design features:

- Constructed of industrial grade **Extruded Structural Aluminum**.
- All **Modular Construction**.
- **6" Industrial Casters:** four swivel casters at the corners with Total-Lock Brakes. Two Rigid casters located at the mid-point of the dolly.
- **Solid, High Capacity** wheels standard, **Pneumatic, Lower Capacity** wheels also available.
- **Gusset Supports** at all intersections of extrusions.
- **One frame design** supports both Solid-Axle and Mid-Year Body Designs.
- Utilize all **Eight Body Mount Locations** to secure the car body to the dolly.

And these benefits:

- Maximizes body support while minimizing weight of the dolly.
- Easy to ship, assemble, use, disassemble and store.
- Steel construction large diameter casters. Total-Lock brakes, keep the dolly in place while working on the body.
- Solid wheels roll easier, have higher load capacity. Pneumatic wheels are better suited for transporting over gravel or uneven surfaces.
- Gussets provide maximum strength while still providing easy adjustability.
- No need to design, build and assemble two different frames on your own.
- Secures the body to the dolly during transport to and from the painter or in and out of the the paint booth. Minimizes flex on the body during transportation.

With our modular construction, you only purchase what you need. Whether you are only restoring your own car or working on multiple body styles. We give you the flexibility to configure the dolly to suit your needs.

Part Number Configuration

NA3370-XX	
Caster Style	Body Style
1= Solid Wheels	A= '52-'62 (Solid Axle/C1)
2= Pneumatic Wheels	B= '63-'72 (Mid-Year/C2-C3)
	C= '73-'82 (C3 Shark)
	D= All of the Above
