Carter WCFB carb screw locations

Here is a photo of a WCFB carb which should print at actual size of the carb. You can use it to make a template to make a "screw holder" useful when you disassemble the carb(s).

Leftover ¼"
Masonite with some
1/4x20 screws for
legs

Being forgetful at times, I made this gadget to hold the screws as I remove them from the carbs. Since the length of the screws varies according to location this template helps to get them back where they belong.
