

Ground Strap and other ground point locations – 1960 Corvette

Dave Zuberer

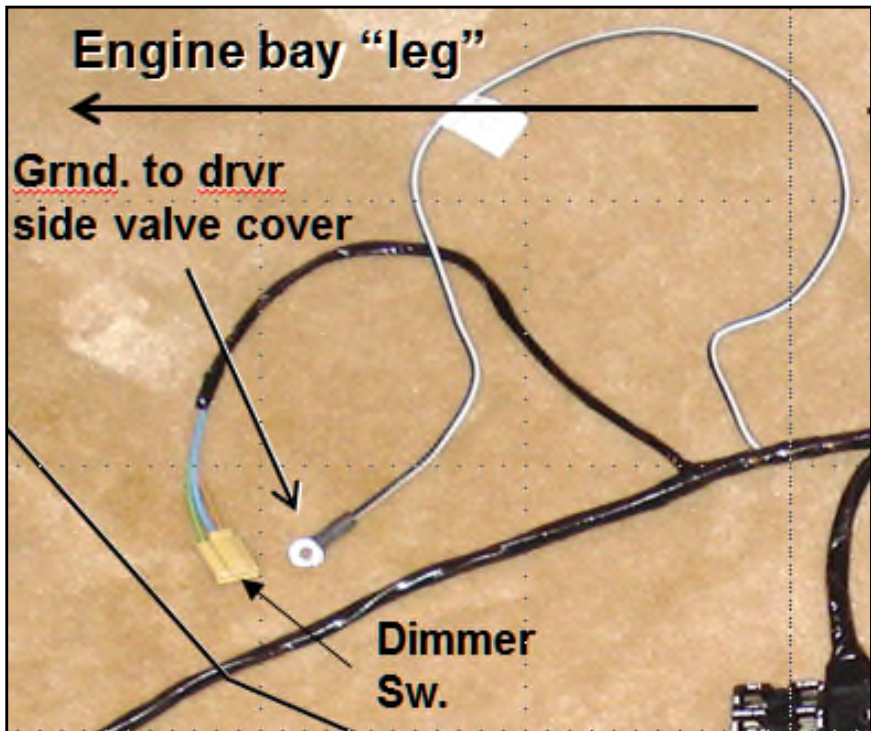

Note the information here is based on my 1960 A.I.M. and on connections I made during rewiring of our 1960, manual transmission car. The ground strap locations also match the information provided by Lectric Limited with the Deluxe Harness set that I purchased. I cannot vouch that all the locations are 100% correct nor that I have all that there are. I have arranged the materials essentially in a “front to rear” fashion.

Voltage Regulator to Generator Ground

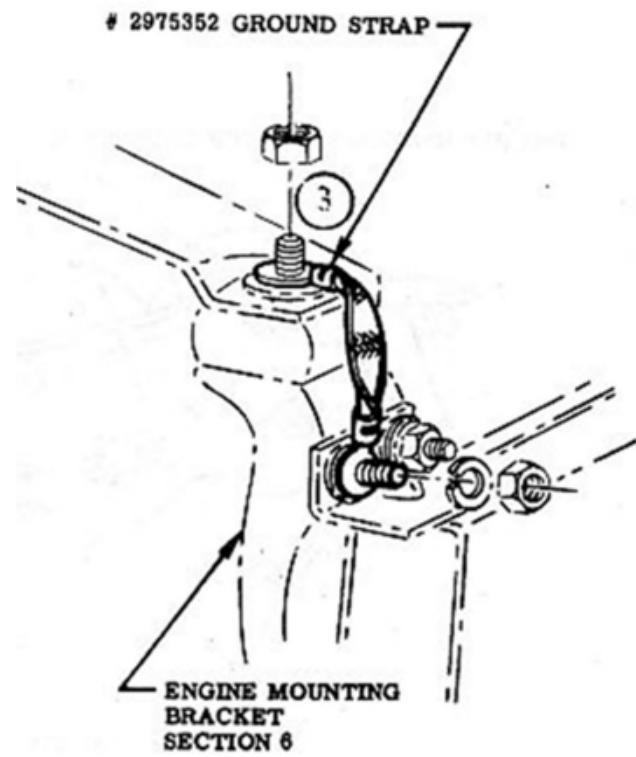

Wiring for 1960 Voltage Regulator

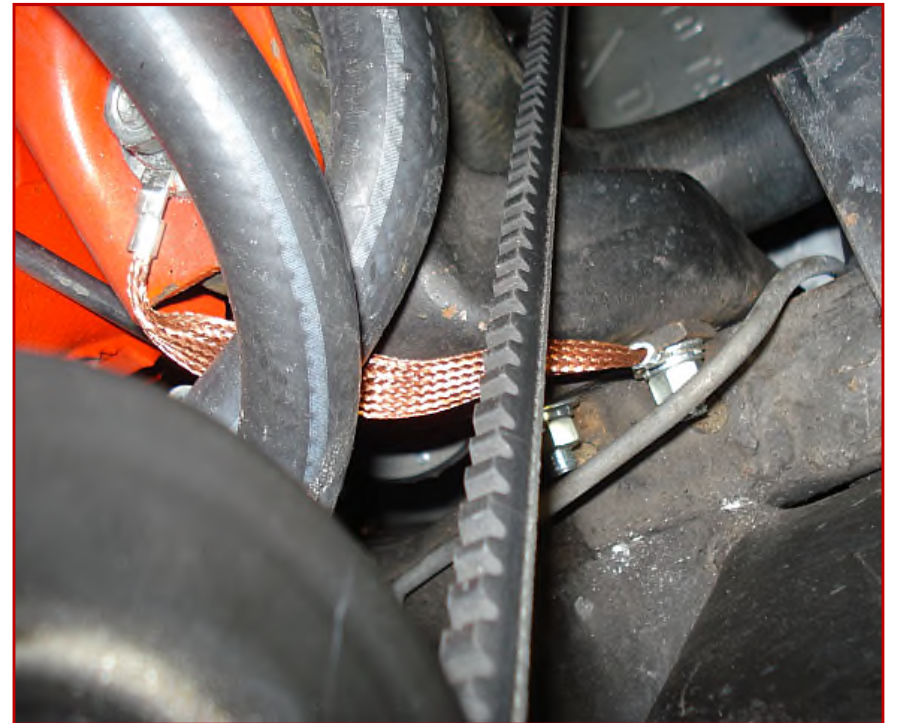

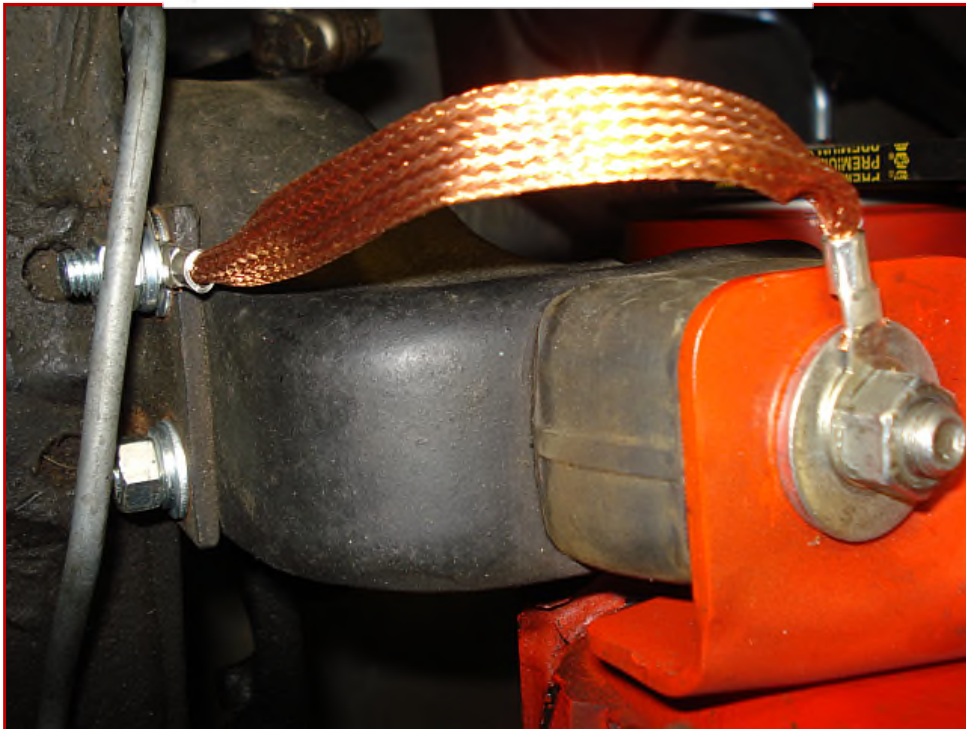

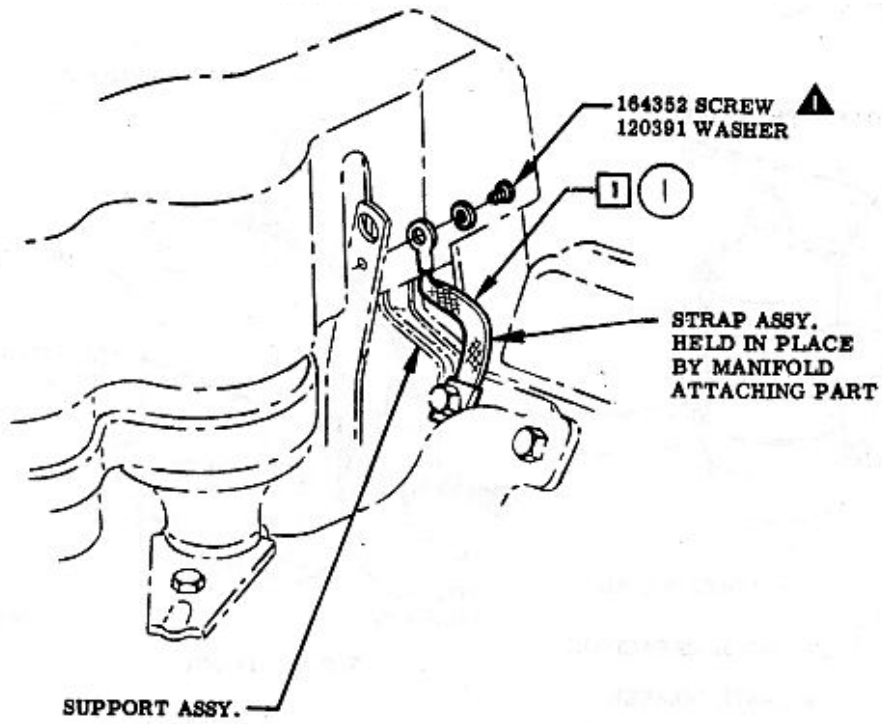

Blk/Wht ground from Dash (Main) harness through firewall to inboard rear valve cover screw on driver's side

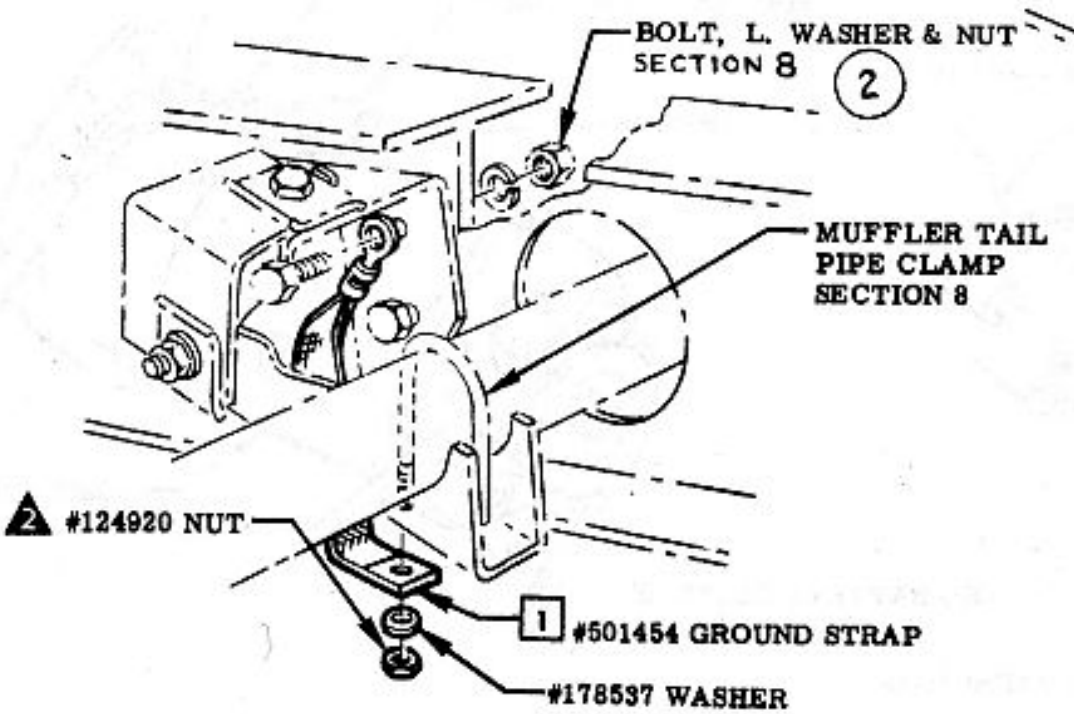

Engine Mounting Bracket Ground Straps

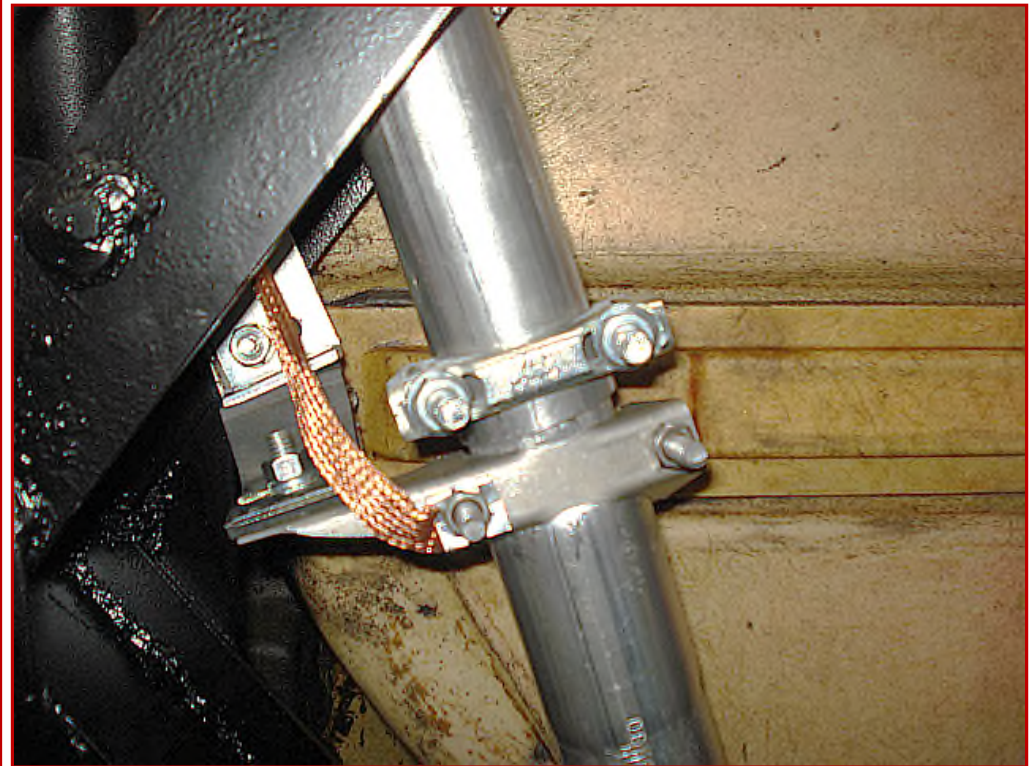

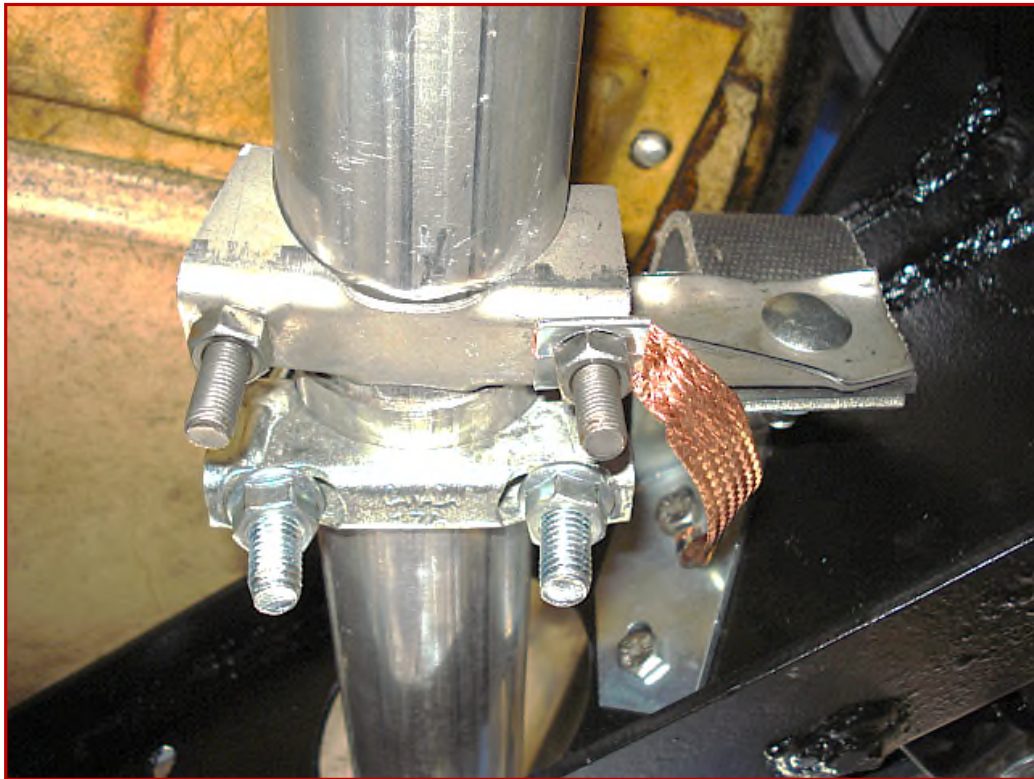

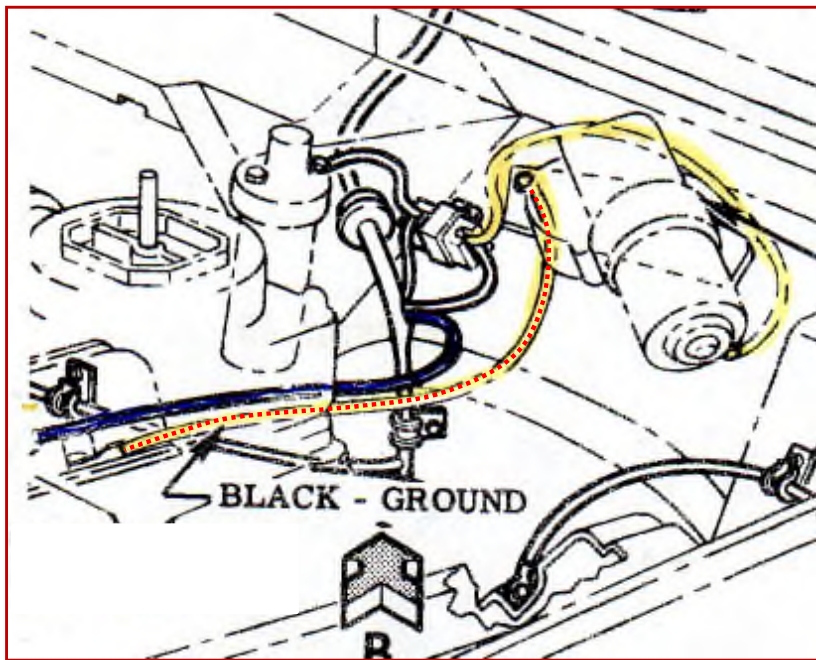

Throttle Linkage

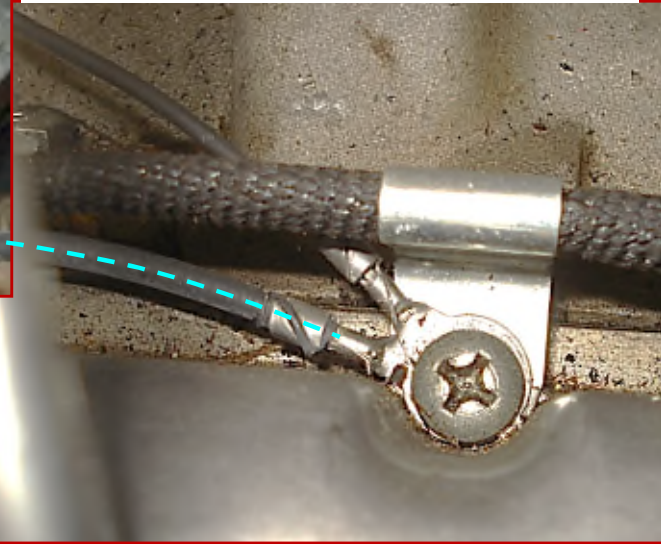

Exhaust Bracket Ground Straps

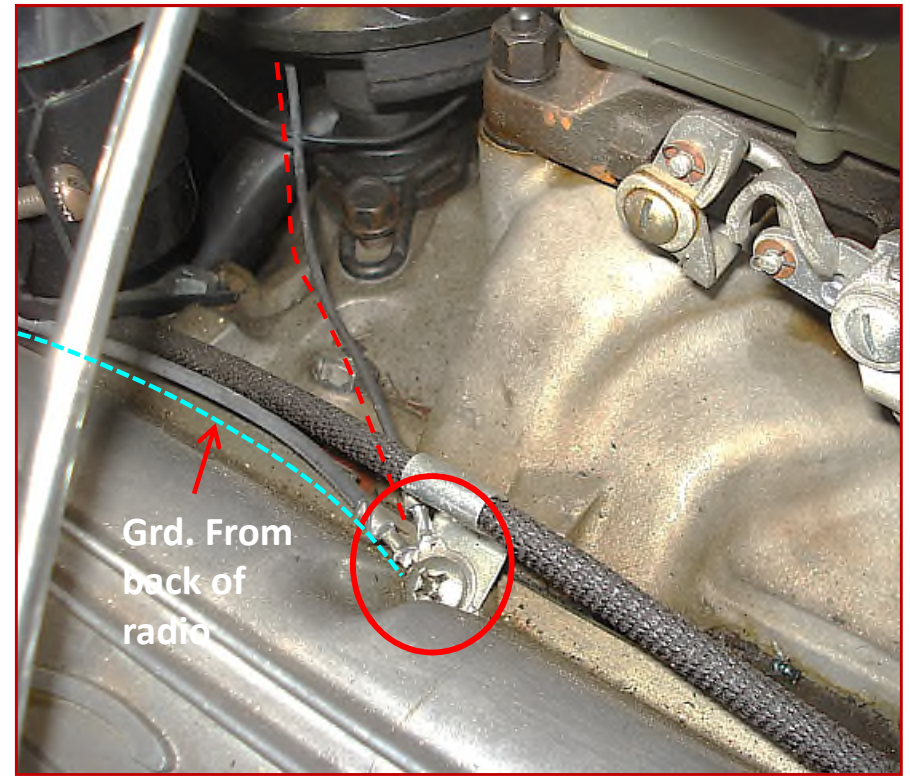

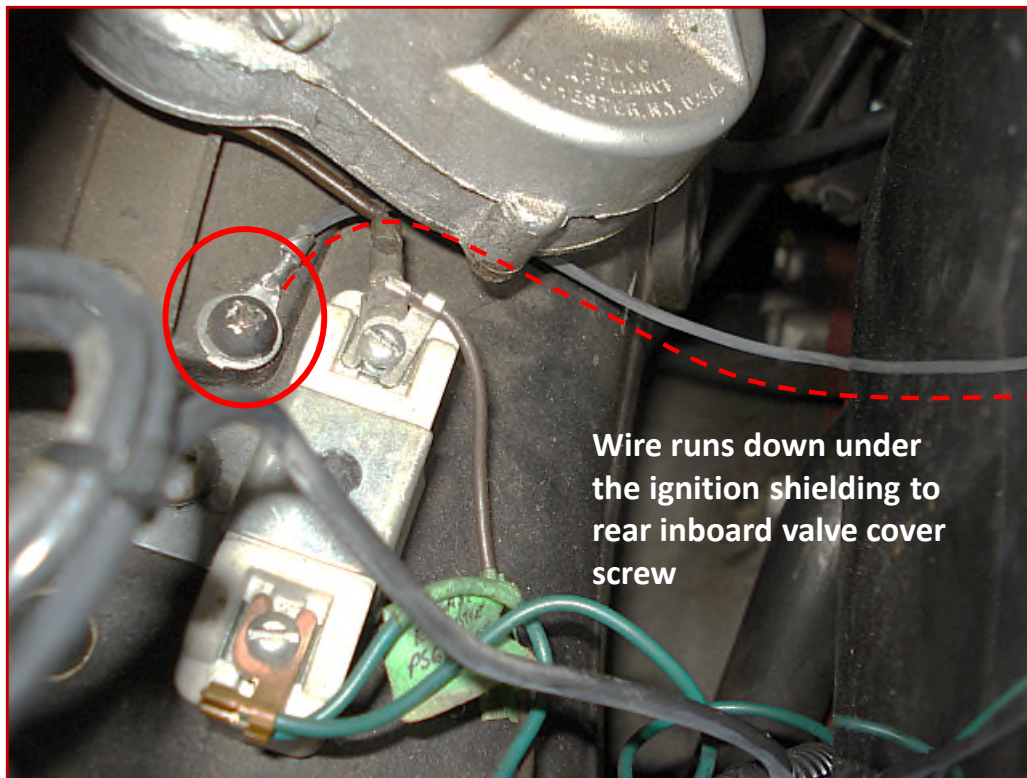

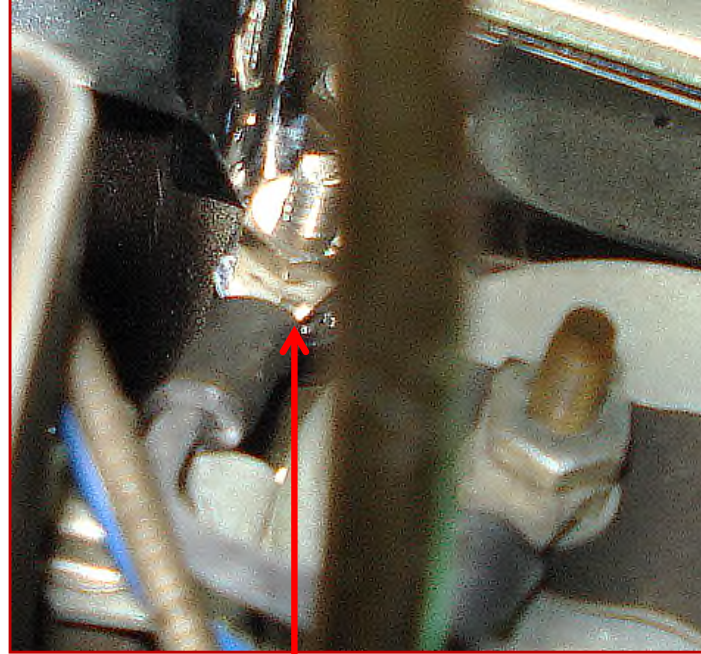

Wiper and radio grounds to psgr side valve cover

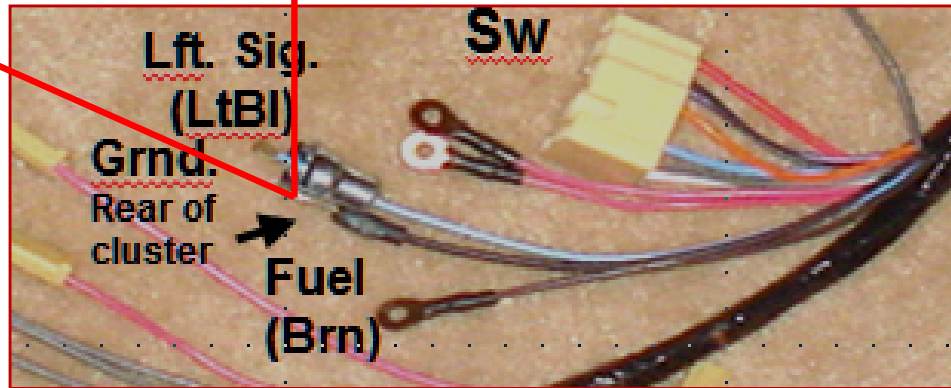

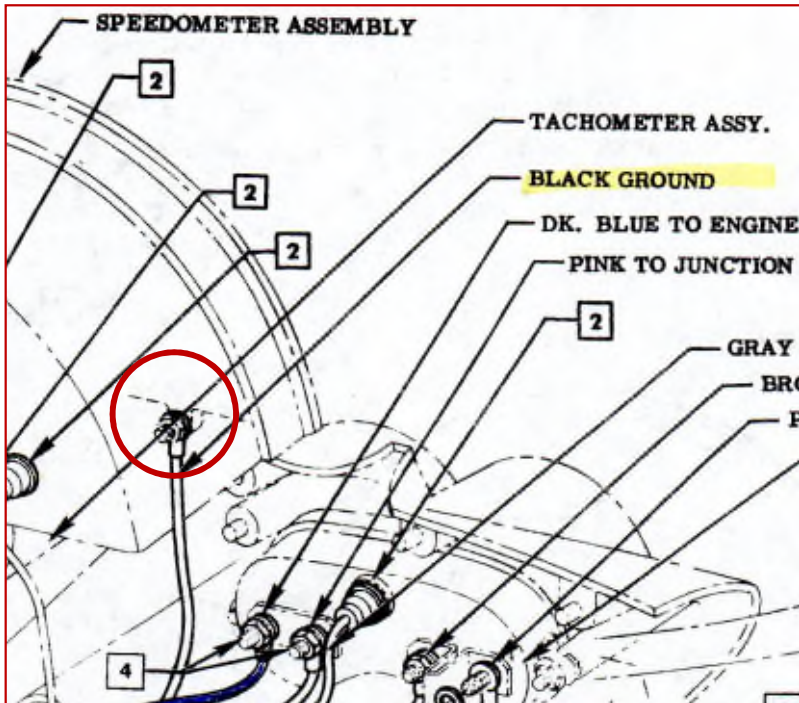

Note: this is an after-market radio

Note: all ground wires above are black. The colored lines are for tracing the routing.

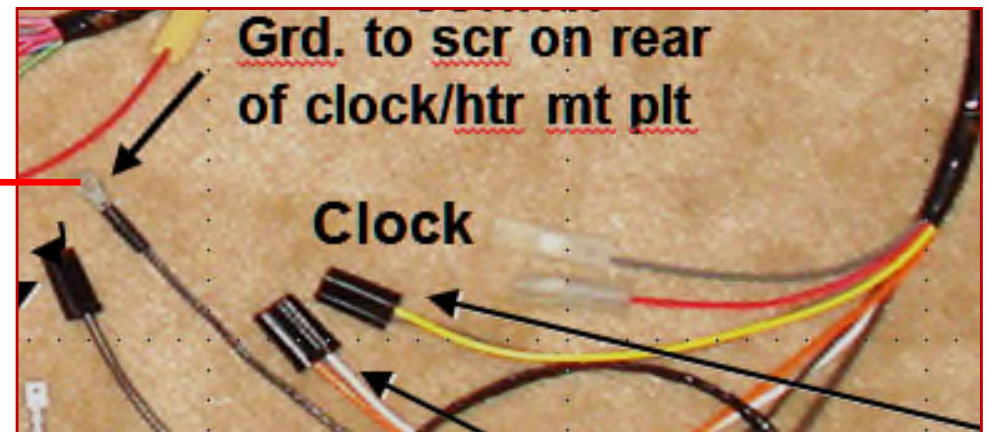

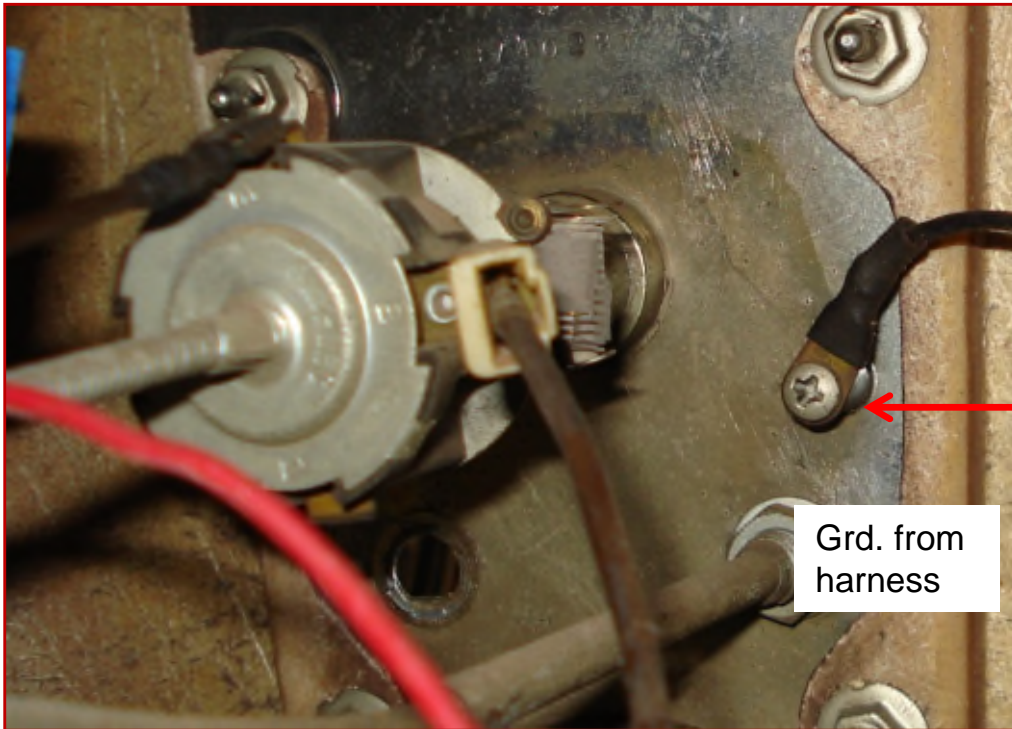

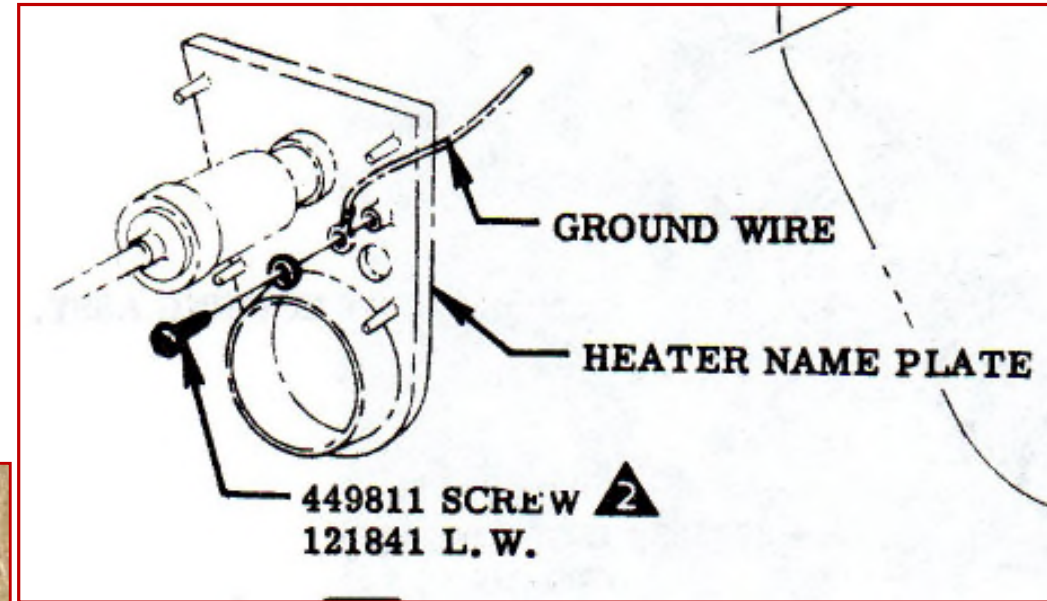

Note: I am not certain that this is the correct location for the ground to the cluster back.

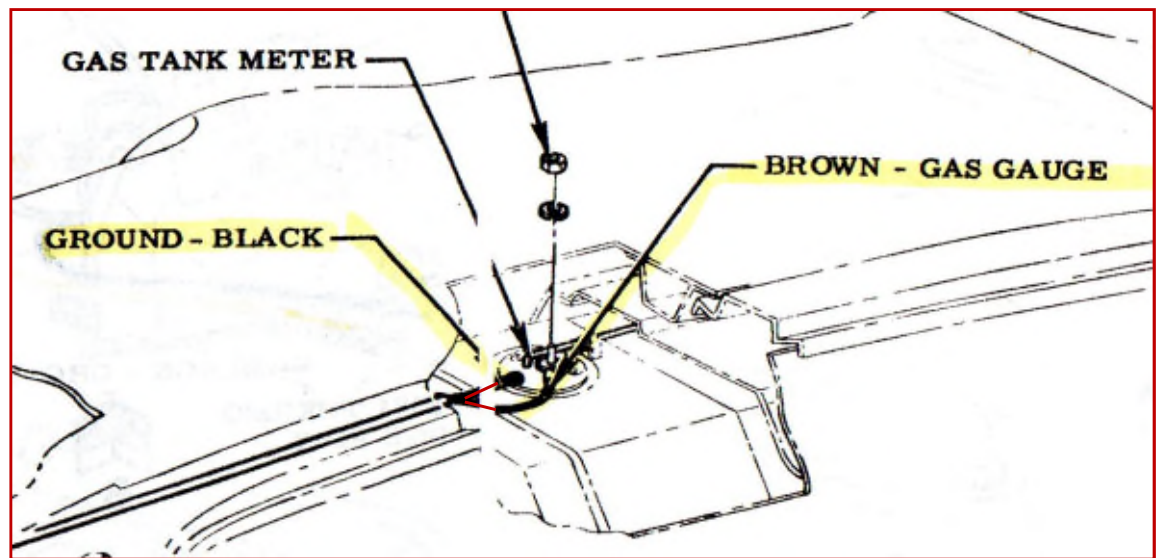

Dash (Main) Harness ground to back of instrument cluster

Ground from Dash (Main) Harness to heater name plate

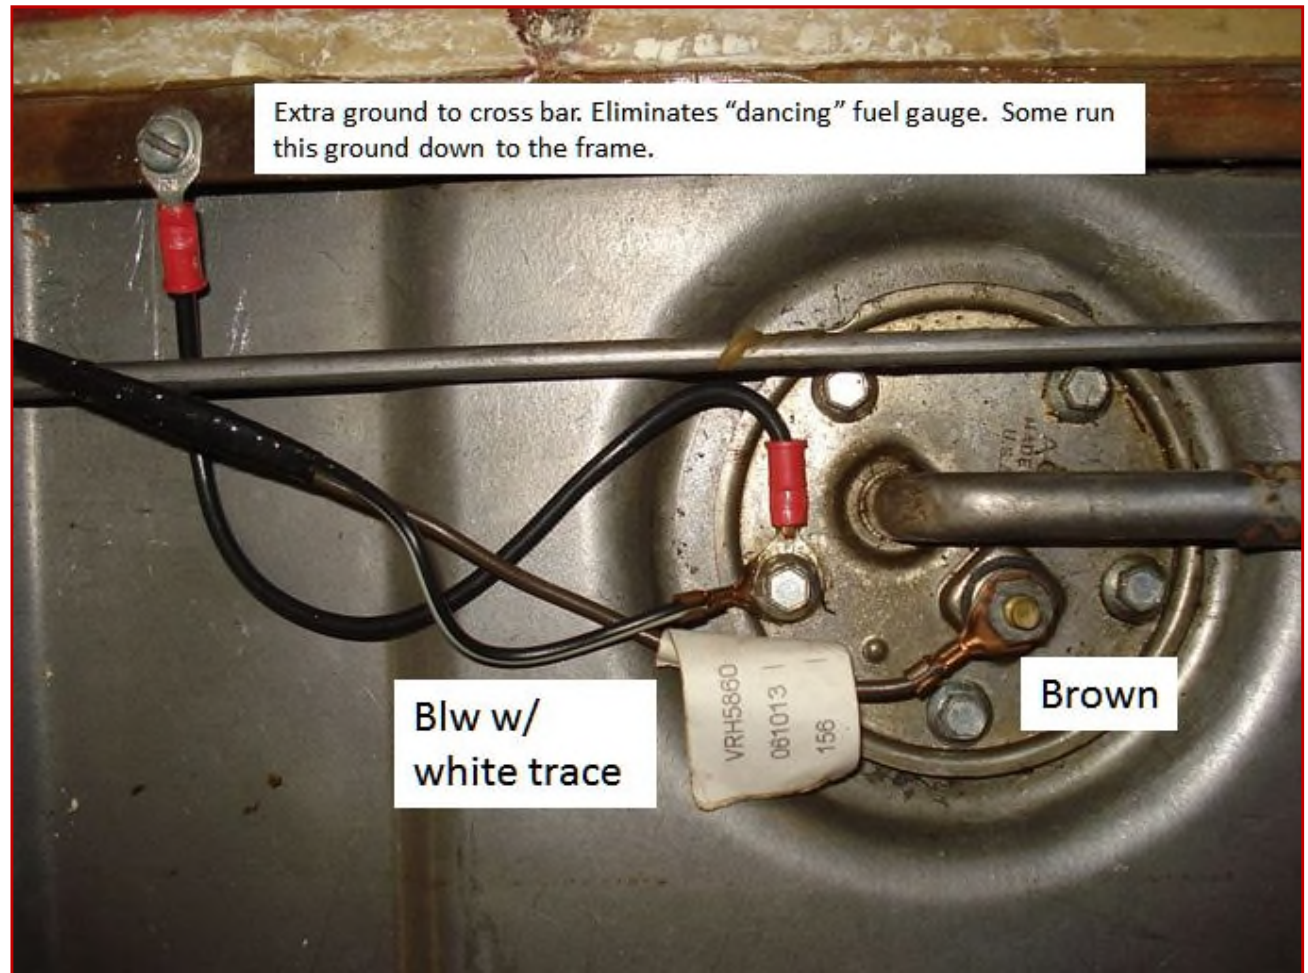

This ground wire is in what I call the "radio/clock" group

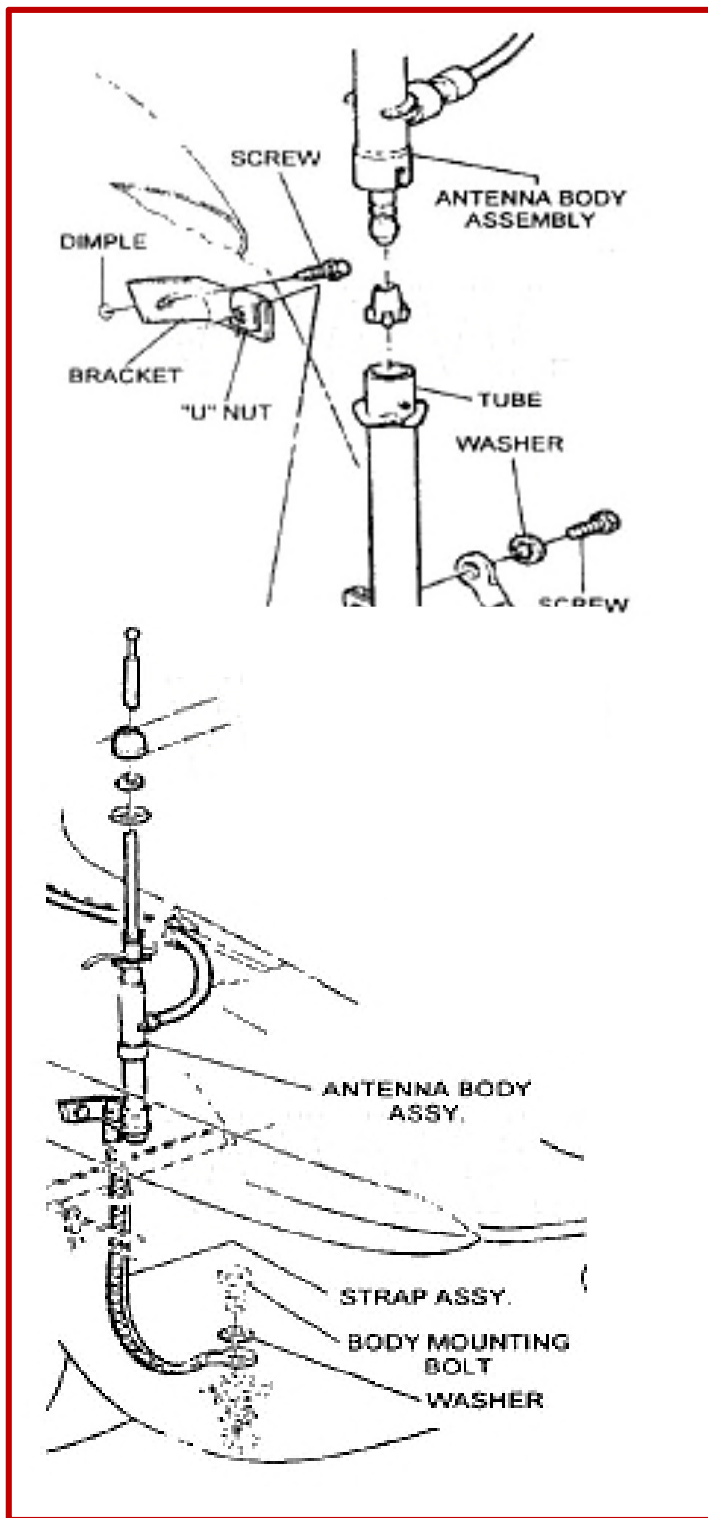

Fuel gauge sending unit ground (Blk/Wht) from harness.
"Auxiliary" ground added to eliminate dancing fuel gauge.

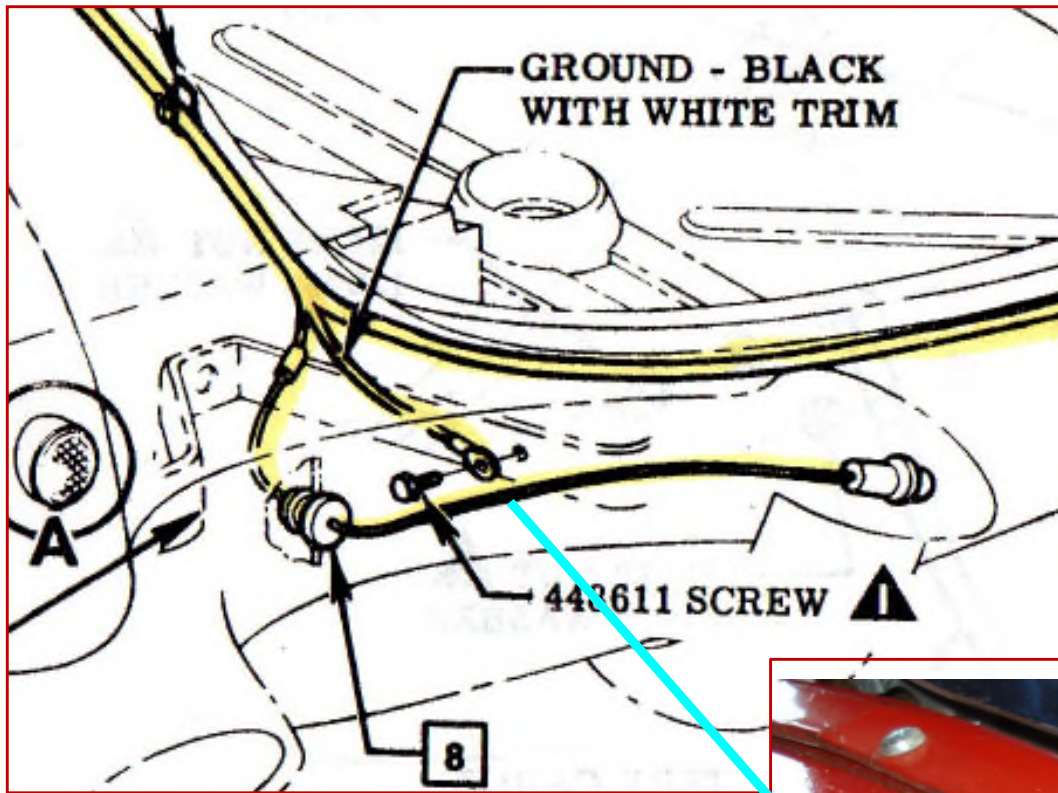

Body wiring harness –
rear lamp and license
plate

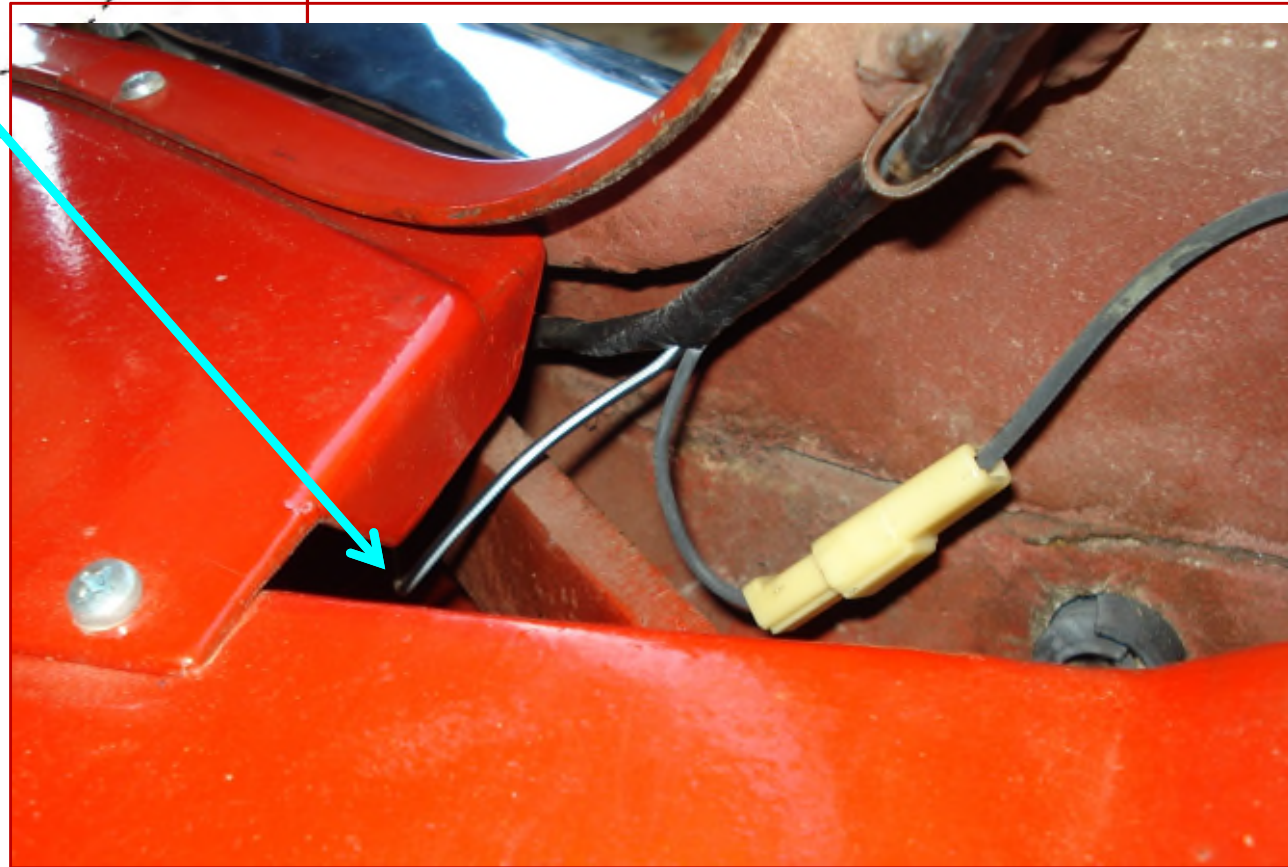

Antenna Ground Strap

Rear body harness to driver-side bumper bracket
