Diagram courtesy of John Hinckley

1. Insert tag end through hambone and then through the tightener. Loop tag end up over the top of the tightener and then down around the top of the ham bone back through it. 2. Continue the tag end back over the top of the tightener and then down through the tightener and (3) on through the hambone toward the belt. The tag end of the belt material will be between two earlier loops. 4. Pull on the belt and tag simultaneously to snug the tightener up against the hambone.

To buckle
