

## Kit Contents

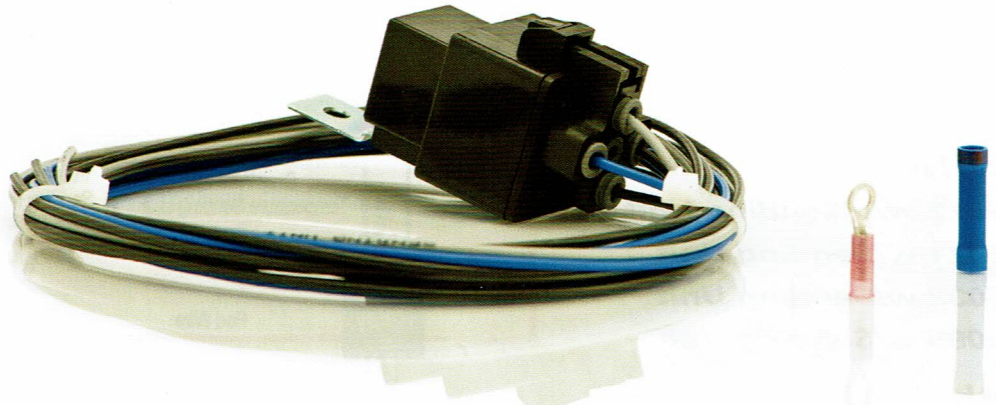

### Electric Fan A/C Wiring Harness Kit

#### Electric Fan Air Conditioning Wiring Harness Kit with 40 Amp Waterproof Relay

**Be Cool Part:**  
**#75095**

**Kit Contents for #75095:**

- Weatherproof Relay and Socket
- Wire Terminated at the Relay
- Butt and Eyelet Connectors

**See page 12 for installation instructions and page 13 for a wiring diagram.**

## Overview

### Electric Fan A/C Wiring Harness Kit

**Design Intent:**

- This kit is designed to operate electrical fan(s) in conjunction with an air conditioning system.
- To prevent damage to the A/C system the electric fan(s) should move air through condenser when the A/C is turned on.
- It is compatible with all vehicles and wiring harnesses. It can be used on a positive or negative ground 12 volt DC vehicle.
- This kit can be used with Be Cool Wiring Harness Kits #75021, #75032, #75098, #75100, #75117, or #75104.
- The wiring harness is protected by many weatherproof components. However, care should be taken to position the device where it will be as dry as possible and the least exposed to extreme temperatures.

**Theory of Operation:**

- The relay is actuated by power to the air conditioning compressor.
- When the relay is actuated one set of contacts closes the circuit to bypass the temperature sending unit.

**See page 12 for installation instructions and page 13 for wiring diagram.**
