

LED REFLECTOR INSTALL

TOOLS NEEDED

Tiny flat blade screwdriver
panel removal tool

#30 torx screwdriver

Using a small screwdriver, pry out the cover over the screws behind the door pull. The 3 tabs on this piece reinstall at the bottom.

Using a #30 torx screwdriver, remove the 2 screws behind the door pull. Make sure when replacing the piece covering this area you put the 3 tabs at the bottom.

Pull door handle out slightly so you can see the small slots to release the door handle bezel. Push down on the top screwdriver and up on the bottom one to release the bezel. It will take some force to get it off!

This picture shows the tabs you are releasing with the screw driver. There are 2 to the rear of the bezel that it takes force to release.

Pry up on the bottom of the drivers side switch panel to remove.
Pry up on the **Top** side of the passenger side switch panel to remove.

Depress tang on connector and unplug connector for the door switches.

This is a panel removal tool available at any parts store. This is used to remove the doorpanel clips.

This is the approx. position of the first retainer. Work your way around the bottom of the panel prying the clips loose. There are 7.
