

## **Fixing Ashtray door that will not stay closed**

- 1) Use a small flat head screwdriver to pry on the side to release the door to get it out from the assembly.

- 2) Check to see if the door striker is worn, and if so, you can use epoxy to build it up then file to the shape required as per the above pic.  
If the striker is OK, then it is probably the spring that is not in the proper location.
- 3) Make sure the long wire of the door spring is in the small hole where the cog is otherwise the door will not stay closed. (Fig 1-Fig 2-Fig 3-Fig 4)
