Corvette: GM's Captive Ferrari Fighter?

∠ Stock RatingOverweight

o Industry View
 Cautious

Price Target
\$46.00

We look for today's all new mid-engine supercar to halo a subbrand that hatches an 100% electric Corvette SUV driving a 5fold increase in volume to 80k units by the mid 2020s. Base case DCF value of \$7bn, bull case of \$12bn. More than a needle-mover for GM.

It's time to look at the potential of GM's supercar brand. Corvette. A brand that has been synonymous with a single product... a 2 seat sports car, since its first generation (the C1) in 1953. Historically, the thought of GM expanding Corvette into anything beyond its single model status would have been *brand heresy*. But times are changing in global autos. GM, like many of its OEM brethren, are faced with the daunting task of pivoting from an internal combustion hegemony to allelectric propulsion which places strain on technological and financial resources. At the high end of luxury and sports car segment, many brands have expanded their model portfolios far beyond their traditional footprint. Lamborghini, Maserati, and Porsche rely on SUVs for ~30%, ~40%, and ~45% of their global unit sales respectively. Even Ferrari is introducing an SUV, the "Purosangue" in 2022. Ferrari's impressive growth and product expansion success since its carveout from FCA has taken its valuation to >\$30bn... almost the enterprise value of Ford Motor Company.

Ultimately with the launch of the 2020 Corvette, we're looking at the potential of a hypothetical Corvette brand expansion, into SUV and BEVs, as a way for GM to help fund the transition to electric. This would be analogous to what other supercar brands have done, like Lamborghini and Porsche. *We note the company has not confirmed any such plans*.

Ford Mustang Mach-E unveil stands as a clear precedent with relevance to

Corvette. Ford decided to launch its first BEV SUV under the moniker of its single-product sports car brand. The Mach-E extends the Mustang brand into an all-new powertrain, segment and consumer base. Arguably, Ford's most important powertrain statement in a generation... and they use a brand other than the 'blue oval.'

We have constructed a DCF valuation for Corvette on a stand-alone basis, which we value at **\$7bn** in our Base Case. We also compare Corvette to a select group of luxury sports car peers to examine how the introduction of an SUV can change the breadth of revenue.

General Motors Company Risk Reward

Price Target \$46

Price target of \$46 is the midpoint of our \$35 base case derived from our LBO model and our \$57 discounted SOTP bull case. We are bullish on management's strategy of focusing on high margin pickups in the NA market, skipping hybrids and moving directly to BEVs and monetizing Cruise to share the burden of capex in Auto 2.0. We see a potential China exit in the future, similar to the exit of Europe. We see reasonable scope for GM management to take steps towards more radical structural change in its group to address issues depressing its multiple and to attract the talent, capital and business/technical partners required to be more relevant in Auto 2.0.

Bull

\$57

Strategic moves to seed separate auto tech portfolio. Fundamental repositioning of Cadillac as a 'captive Tesla.' Remaining businesses generate substantial cash flow that can be used to restructure/exit loss-making passenger car operations. Given the rapid pace of technological change, we believe the catalyst path to unlocking SOTP value could accelerate in 2019. It's a race between management execution and a late-stage global auto cycle.

Base \$35

US SAAR declines to ~16.5mm in 2020, enough to generate profit but at substantially lower than record 2017-2018 levels. No significant changes to business structure to preserve tech value. This case assumes GM's North America margins are 8.4% in 2020 (6.8% at company level) while China JV profit declines are more subtle. Rest of world regions near break-even.

Bear \$15

US SAAR faces more serious used car and auto credit pressures. US SAAR in grips of cyclical downturn limits GM's ability to sustain high margins and cash flow. Working cap outflow eliminates 100% of net industrial cash. EBITDA falls by more than 50%. Chinese JV dividends worth less than \$4/share as volume growth stalls and margins collapse. Deferred tax assets are worthless.

Investment Thesis

We have modeled GM heading into a cyclical downturn in the US market.
 Profits and cash flow are highly dependent on N. America and China. Nearly all of our Adjusted EBIT forecast for GM is in NA.
 New entrants compete for capital and precious human resources, especially in tech and software development.

GM management have a proven track record to allocate capital away from structurally challenged areas towards repositioning the business model.

Attractive valuation does not discount optionality to hidden franchise value such as Corvette, Cadillac, etc

Investment Risks/Risks to Our PT

We remain concerned about the value of used vehicle prices in the US market given unprecedented technological change. Risk of impaired consumer credit and a potential buyers strike is high.

Capacity appears to be growing faster than demand and auto credit balances are at record highs. Rising supply of off-lease vehicles add pressure to the used market – an important store of consumer credit.

The strategic initiatives implied by our \$46 price target to unlock hidden value may not come to fruition either due to external factors (the cycle) or management execution.

Potential Catalysts

 Potential China government stimulus to counter the slide of auto sales in the market.
 Initiation of GM Financial dividend
 Further nontraditional auto tech

partnerships/capital return announcements.

Corvette: Where Are We Today?

Corvette & 2020 Stingray

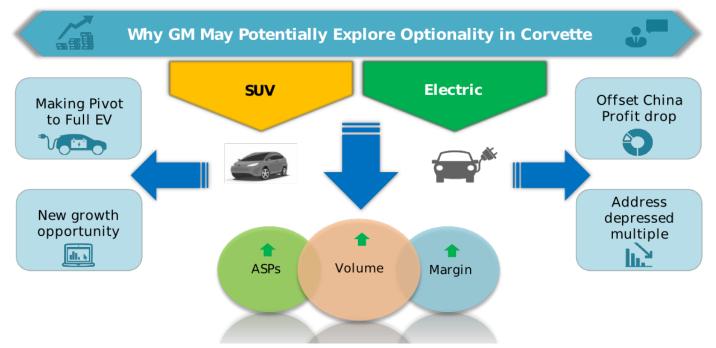

Why are we talking about Corvette? In our discussions with investors, the topic of Corvette rarely comes up. Moreover we are convinced that investors do not think Corvette is a needle-mover for GM stock. We think investors are ascribing, at best a \$2bn valuation to Corvette (our DCF Bear Case), and at worst, O value. In essence, we think that the Corvette brand is undervalued and underappreciated by the market. Historically, Corvette has served as a platform for GM to showcase its technology in high performance engine + chassis development. This also lends Corvette to be a platform for showcasing an all-electric vehicle, including an SUV. The commercial strategy filled a uniquely American niche of offering a supercar type driving experience at an affordable price (1/2 to 1/4 the price of other nameplates)...while capitalizing on the brand's heritage and loyalty. We note that GM wouldn't comment on any future plans around Corvette models and going electric, other than to say they look at a variety of things and recognize the strength of the Corvette brand...

We see further opportunity to develop Corvette in terms of:

- **1.** Commercializing a performance-oriented BEV strategy.
- 2. Expansion of product line into SUVs and Crossovers.
- **3.** Strong top-line growth, margins and free cash flow generation.
- 4. Recognition of value from shareholders.

For these reasons we explore the potential of Corvette throughout this report to provide a lens into the potential of the brand.

Exhibit 1: Why GM May Potentially Explore Optionality in Corvette

Source: Morgan Stanley Research

Supercars are in season. Supercars have been getting more attention by both OEMs and investors. We expect OEMs will examine new ways to grow profit and address their compressed multiple this late stage in the cycle, potentially pushing the company to explore aspects of hidden value to help fund enormous uses of capital. Bloomberg recently reported that VW is considering a "review" of Laborghini that includes a potential IPO. Given VW plans to spend ~€50bn on EVs over the next 5 years, this could potentially push the company to explore veins of hidden value to help fund enormous uses of capital. We note that VW has since come out and denied that it is looking to carve out the Laborghini business. We also note that not all supercar businesses have thrived of late. We've seen Aston Martin face some of these challenges, while Ferrari (which we rate Overweight) has defended its brand and maintained a robust growth profile over time.

Ultimately we see 2 ways that Corvette can become a core "sub-brand" of GM to further increase its relevance...**SUVs & Electrification.**

What is Corvette? Corvette is GM's 2 door, sports car model, that sits within the Chevrolet brand. Sales of Corvette are primarily within the US and Canada. Starting production in 1953, the brand has had 8 generations, with refreshes taking place every 5-10 years. The new C8 Corvette, Mid-Engine (mid-engine provides better responsiveness, handling and weight distribution) will begin production in late 2020. GM has always had one model in the Corvette portfolio. Sales usually ramp after a release to ~35k and stabilize at the 15k mark once the model stales. The Corvette Stingray sits at an aspirational, yet somewhat affordable (relative to other sportscars) price point from ~\$60k to ~\$100k.

Exhibit 2: New Corvette (Mid-engine) Stingray 2020

Source: Chevrolet.com

There are 3 trims of the Corvette Stingray: 1 LT, 2 LT, 3 LT

1LT: Coupe starting at \$60.0k, Convertible at \$67.5k

 1LT is the car for driving purists who want the lightest Stingray possible, but one that's still very well equipped.

2LT: Coupe starting at \$67.3k, Convertible at \$74.3k

 2LT adds a number of comfort and convenience features in addition to color-matched interior options. Includes everything in 1LT, plus: Front curb view cameras, Bose Performance Series 14-speaker audio system, Heated/vented seats and heated steering wheel, Available GT2 seats in Napa leather.

3LT: Coupe starting at \$71.9k, Convertible at \$78.9k

• 3LT is the utmost in luxury performance, with a leather-wrapped interior. Includes everything in 2LT, plus: 13 interior color options, Custom leather-wrapped instrument panel and door, Sueded-microfiber upper interior trim, Standard GT2 seats in Napa leather.

Performance Specs Summary

- Horsepower: 495
- Torque: 470lb-ft
- Top Speed 194mph
- 0 to 60mph: 2.92 seconds
- Engine: 6.2L V8

Mark Reuss at Corvette Reveal Presentation: "Where else can you get a supercar that goes 0 to 60[mph] in less than 3 seconds, for this amount of money."

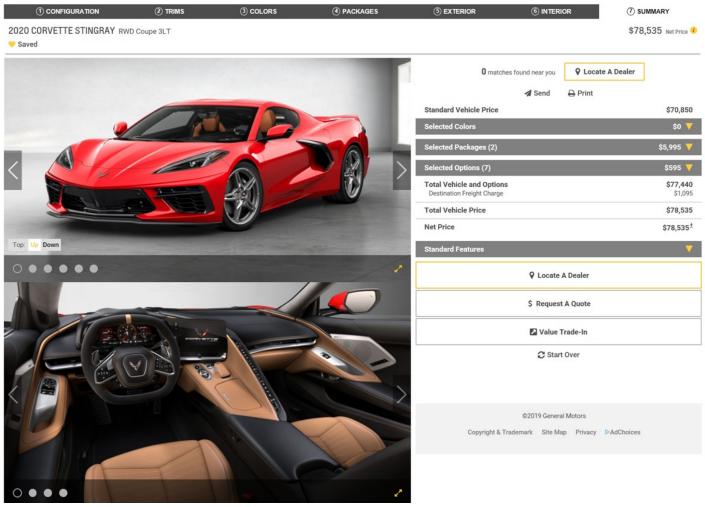

Exhibit 3: 2020 Corvette vs. Ferrari GTB

	Corvette 2020 Stingray	Ferrari 488 GTB
Price	~\$80k	~\$280k
0 to 60mph	<3 seconds	3 seconds
Horsepower	495	661
Engine	6.2 L V8	3.9 L V8

Source: Corvette, Ferrari, Morgan Stanley Research.

We visited Corvette's **website** to configure variations of the C8 in order to ascertain the true average selling pice. We were surprised by how high the ASP can rise after adding some features and configured our car to \$78.5k (exc. tax and fees) for the 3LT Coupe.

Exhibit 4: 2020 Corvette Customization Website

Corvette's Assets: Where is Corvette Made?

Tonawanda Engine Plant

• The Tonawanda plant will produce the 6.2L Small Block V-8 engine that will power the 2020 Chevrolet Corvette Stingray.

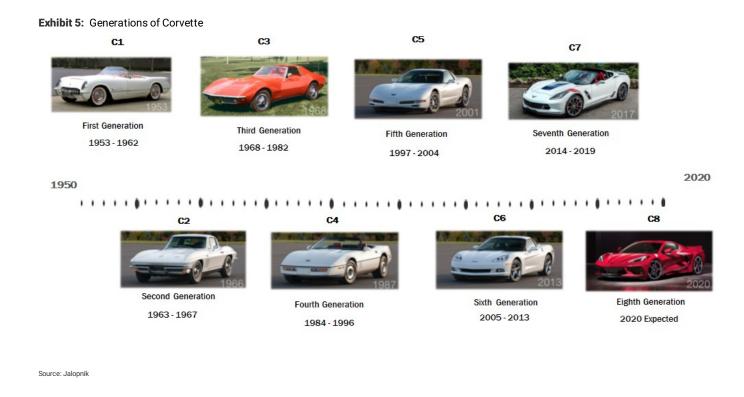

- Location: Buffalo, NY
- Employees: 1,540 total employees (1,356 hourly employees, 184 salaried)

Bowling Green Plant

- Bowling Green Assembly is the only final assembly plant in the world that builds Corvettes
- Location: Bowling Green, KY
- Employees: 1,052 total employees (888 hourly employees, 164 salaried)
- Other Output: 2019 Chevrolet Corvette Stingray/Z06/Grand Sport/ZR1, LT1, LT4 and LT5 6.2L V-8 engines for Corvette

Corvette Timeline - Below is a timeline of Corvette models over time. It highlights 8 models spanning over 7 decades. The brand has stood the test of the time and has maintained its relevance across decades, with one core model solely in its portfolio in each epoch.

Corvette Positioning Landscape

We illustrate the supercar competitive landscape by focusing on 2 key vectors: **price** and **units.** We believe that the Corvette brand currently sits in a somewhat niche market of aspirational yet relatively but low ASP (for a luxury sports car) with low total unit sales, especially over the course of its 5-10 year life span as a brand. We think this can change. We believe the Corvette brand can expand model options to potentially incorporate a range that includes a high ASP (~\$150k) sports car that could resonate with enthusiasts, as well as an SUV, amongst other models. Ultimately what the competitive positioning exhibit illustrates to us is that Corvette has room to improve both price and volume, relative to its current position.

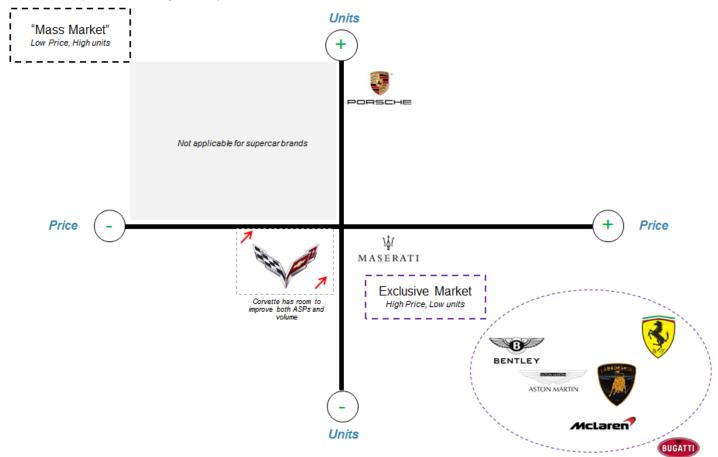

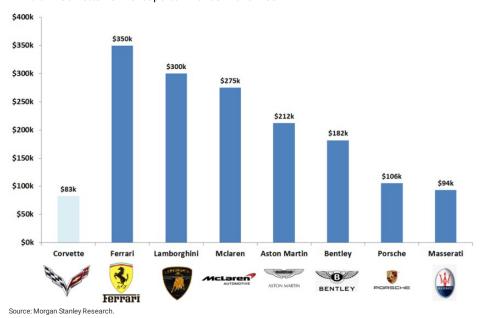

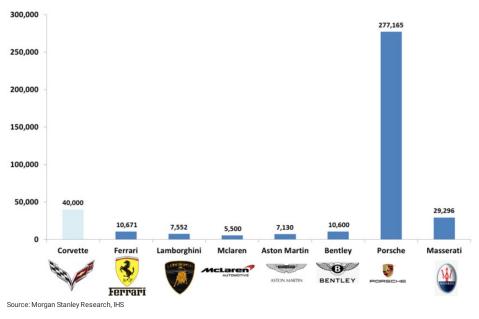

Exhibit 6: Competitive Positioning Landscape

Source: Morgan Stanley Research

Exhibit 7: Corvette ASP vs. Supercar Brands - 2020 MSe

After evaluating the competitive landscape, we believe there are 4 ways that GM can successfully maximize the Corvette brand as a way to increase value to shareholders: 1) segment expansion, 2) geographic penetration, 3) electric propulsion, 4) price/mix improvement.

Exhibit 9: Potential Supercar Playbook for Corvette

Segment Expansion

- Corvette currently has one car in its lineup that is refreshed approximately every 8 years. We assume Corvette sells around 40k units in 2020, \$3.3bn in revenue which represents 2.2% of GM's 2020e revenue.
- If Corvette was to increase their model lineup with an SUV launch, we see the units more than double to ~100k by 2029.
- The current luxury car segment is approximately 5.2% of the total US sales and given light trucks (pickups, SUVs and crossovers) account for over 72% of US new car sales, we see an opportunity to further penetrate the US market through an SUV launch.

Geographic Penetration

IDE/

- Corvette sells the entirety of its units in North America, broken between the US (91%) and Canada (9%).
- Given the US represents ~17mm of the ~79mm global passenger car sales, there is a large amount of unmet demand that could be utilized and GM could leverage production through its existing plants (South America) and JVs (China) to sell the Corvette brand.

Outcomes:

- High Margins
- Multiple Re-rate
- Earnings Power

Price/Mix Improvement

- Two of the most important traits of a supercar brand are: 1) scarcity & 2) high performance.
- Overall higher ASPs from electric or high performance supercars, combined with an SUV, could increase the brand's overall blended ASPs and would be extremely accretive to margins. We estimate incremental pricing \$ flowing through at ~50% margins.

Source: Morgan Stanley Research

Electric

- The move to electric is a necessity for all supercar companies, given they all face the existential threat of emitting vehicles not being allowed to operate in cities.
- Not only will this shift to electric be a regulation push, but we think consumers will also demand the vehicles, given internal combustion cars will not be able to compete in performance with an electric supercar.

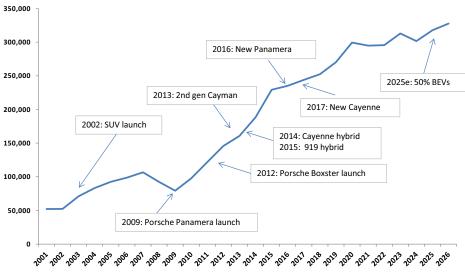

Improvements to Corvette becoming a supercar company...Corvette does not have the F1 heritage or family built tradition associated with other European supercar companies such as Ferrari. However, Corvette does have brand authenticity associated with American-built performance and quality over decades. Resonating with its loyal base while maintaining relevance with new generations and across new segments could increase its brand awareness and hold or increase its brand value in decades to come.

Lessons Learned from Porsche

While acknowledging many differences, we see valuable examples from Porsche. In our view, Porsche has successfully manifested itself into a cash cow by maintaining elevated pricing whilst servicing a variety of segments. While the risks of brand dilution have always existed, Porsche has managed this delicate relationship of scarcity vs volume growth particularly well, which has been reflected in its financials.

Porsche's Turnaround- Porsche faced financial difficulties in the early 1990s which was compounded by its units falling from ~50k to ~14k from 1986 to 1993. Porsche devised a plan to increase scale and its answer was the Porsche Cayenne which was introduced in 2002. This resulted in Porsche units doubling in 6 years. Today Porsche sells across a variety of segments: SUV (Cayenne), Electric (Taycan), Low ASP sportscar (Panamera), High ASP sportscar (911). Our EU Autos analyst, Harald Hendrikse, thinks: **50% of Porsche's sales will be BEV by 2025, and that Porsche currently generates 17-18% EBIT margins.** Could Porsche be a playbook for Corvette to follow..?

Source: IHS, Morgan Stanley Research, Porsche

In Summary, we think of Corvette as a free call option within GM. Specifically, Corvette possesses authentic supercar qualities that allows it to function as a unique sub-brand within GM. The brand also has immense optionality and potential through: driving up ASPs, increasing unit sales, expanding into new segments, building out an electrification strategy and if desired, exploring a carve out, from GM

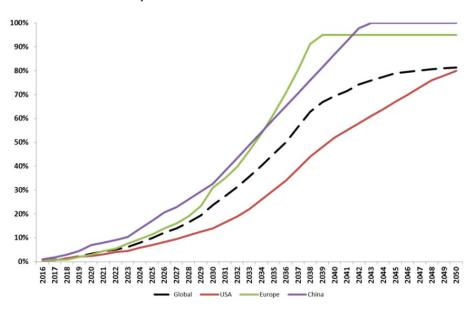

Electric Corvette?

The Case for Rising EV Penetration

Across the auto industry, electric vehicle penetration is driven by: 1) **regulation**, 2) **new OEM players** (Rivian, chinese EVs), 3) **mega-tech** players (Google, Apple, Amazon), 4) shifting **consumer tastes and preferences** and 5) **electric vehicle infrastructure** build-out.

We think this shift will have profound effects for OEMs in terms of: 1) **demand** for diesel cars (and eventually all ICE cars), 2) **ICE residual values** / used car pricing dropping which the distorts value proposition of a new car, 3) **EVs impair previous research and development dollars** spent on ICE, as well as 4) **brand prestige** (EVs are more commoditized) and overall it forces OEMs to offer BEV alternatives which leads to large 5) **increased capex** burdens. Those OEMs that don't shift will incur significant penalties. We also think this will be a region by region nuances in the acceleration of EV penetration, with Europe and China leading the way.

In the US, we forecast ~400k BEV units in 2020, ramping to 2.2 million by 2030. We see BEV Penetration from 2.4% in 2020 in the US up to 14% by 2030.

	2020	2025	2030	2035	2040	2045	2050
USA	2.4%	7.0%	14.0%	30.0%	52.0%	67.0%	80.0%
Europe	3.0%	11.5%	31.0%	61.9%	95.0%	95.0%	95.0%
China	6.9 %	17.2%	32.6%	59.8%	86.9%	100.0%	100.0%
India	1.0%	5.0%	30.0%	55.0%	85.0%	100.0%	100.0%
Global	3.4%	10.0%	23.7%	45.1%	69.3%	79.0%	81.4%

Exhibit 12: EV Penetration By Sales

Source: Morgan Stanley Research

Why Electric Corvette?

Why Corvette? We think an electric Corvette fits within GM's electrification strategy and can complement other areas targeted for electrification including Cadillac. In our opinion, Corvette is a strong candidate to moving to EVs. As GM has eliminated its hybrids and has strategically prioritized 100% electric BEVs, it will need to find a new "model" other than the Chevrolet Bolt to reignite some relevance in the EV market. We also think launching a BEV model with a sports car ensures high performance and captures the attention of media and customers.

Source: Morgan Stanley Research

GM EV Strategy: GM's EV strategy is aimed at an 'all electric future' which emphasizes pure BEVs over hybrids, which are being phased out. GM aims to invest ~\$8bn in EVs and launch 20 new EVs globally by 2023. GM was one of the first to market with a mass market EV in the Chevy Bolt. In January, GM made Cadillac the centerpiece of its EV strategy and the company will double its engineering resources focused on EV and AV programs in the next two years.

Recently as part of the UAW negotiations, **Reuters** claimed GM has plans to invest \$3 billion in the Detroit-Hamtramck plant to make electric trucks and vans (BT1 program),

and part of a broader \$7.7 billion investment in GM's U.S. plants over the next four years. Also of note was that "the pickups and SUVs in the BT1 family will use a new dedicated electric vehicle architecture, including a "skateboard" chassis that bundles electric motor and batteries".

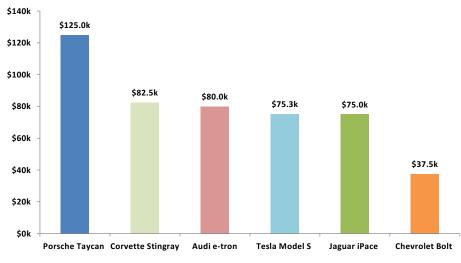

"Hybrids are just countermeasures to an ICE. You can't spend money to force the customer to carry around extra stuff they may not need. Or, you can spend your money on getting the real answer, which is providing the customer a zero emissions, sustainable, affordable solution." - GM President Mark Reuss

As GM has struggled to reinvigorate the Cadillac franchise, GM is investing heavily in Cadillac and it is reported GM has a \$12 billion product pipeline. In 2017, GM stated it planned to introduce a new dedicated flexible EV architecture and an advanced battery system to support the development of at least 20 new models in the US and China, by 2021.

 We expect GM to allocate ~\$25bn on R&D and Capex over the next 4 years towards EVS. While we think Cadillac will be a key pillar of the GM EV strategy, we see room for Corvette to be a part of GM's EV strategy and complement the existing gap of models across Cadillac and select Chevrolet models (e.g The Bolt) currently.

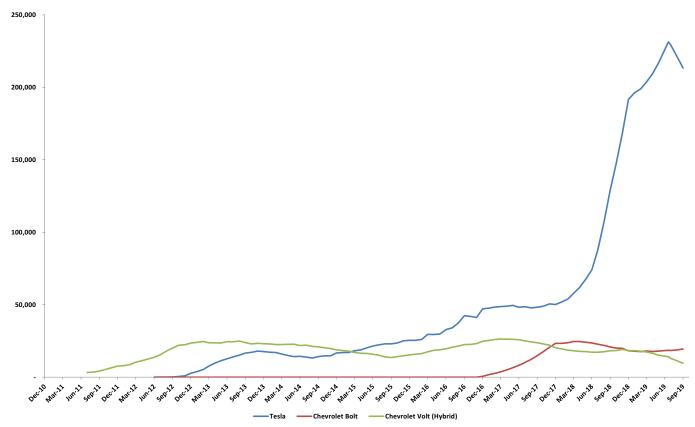

Corvette BEV Strategy: We are seeing many OEM players entering the EV market using the same playbook: release a top of range, high ASP model with best in class performance and full specs to ensure it captures media attention and generate positive customer and industry reviews. Such a move helps to convince customers that EVs are desirable from the point of view of speed, range and performance. We've seen this before with Tesla (through its Roadster) and recently Porsche (Taycan). We also think the mid-engine 2020 model is less likely to be suitable to an ICE or SUV and we see scope for Corvette to launch a dedicated BEV platform for a new 2024 model that takes a clean sheet approach and utilizes a "skateboard" powertrain, similar to new competitors such as Rivian, where the battery sits underneath the axle, adding space and providing better handling and performance.

Exhibit 14: Comparison of Average Selling Prices

Source: Morgan Stanley Research, Company Sources

Source: InsideEVs

Corvette SUV

Why an SUV? The Corvette brand currently only produces one model, in one niche 2 door sports car segment of the market. Given the geographic focus of the Corvette brand in North America and the mix in the US dominated by light trucks (vs cars) at >70% (and rising), the vast majority of the market is underserviced by Corvette. We have witnessed other luxury sports car manufacturers such as Lamborghini (Urus) and Porsche (Cayenne) venturing into SUVs as a way of taking advantage of their dominant brand value and increasing units, through releasing high ASP SUVs. We think this is a logical next step for Corvette. While there are many risks, proper execution can increase the relevance of the brand. If the most exclusive car brand in the world, Ferrari, has a strategy to move to SUVs, we think there is scope for Corvette to do the same.

"[If I were still at GM], what I would do is develop a dedicated architecture, super lightweight, super powerful, Porsche Cayenne–like, only much better and a little bigger, medium-volume Corvette SUV. Target worldwide 20,000 to 30,000 units, and price it starting at \$100,000. Gorgeous interior. No V-6 powertrain. No low-end version. It has to be the stellar premium sport-utility made in the United States, and the Corvette brand could pull that off." - **Former GM exec Bob Lutz**

What would an SUV look like and what will it do to the Corvette brand...?

Exhibit 16: Corvette SUV Rendering: The Future?

Source: Motor1.com

We did some work on what happens to a luxury OEM when they launch an SUV model...Historical results show that brand sales gets a big boost once an SUV launch occurs. After Porsche launched the Cayenne (~\$70k), the SUV represented 28% of its total unit sales within 2 years and reached over 50% in 2015, which it is still maintaining today. Another proof of concept has been the Lamborghini Urus, who has been able to

IDEA

successfully launch its SUV with an ASP of ~\$200k and demand has been robust with IHS forecasting it contributes ~35% of total Lamborghini unit sales today. Similarly for Ferrari, IHS estimates ~860 units of the SUV (Purosangue) in 2022 (~6% of units) vs. our estimates of 993 units (8% of units). We assume the Purosangue is \in 250k at launch. For Aston Martin (DBX) with ASPs of ~£150k , IHS forecasts it will peak at around 29% of total unit sales before normalizing closer to 20% in 2026. For Corvette we assume SUV sales account for the majority of its value by 2025 and continue to expand thereafter.

Below is the SUV as % of unit sales in year 2024 and illustrates the importance of the SUV to the overall Porsche units which is ~50%. We assume Corvette could get to 36% of total units with an SUV launch.

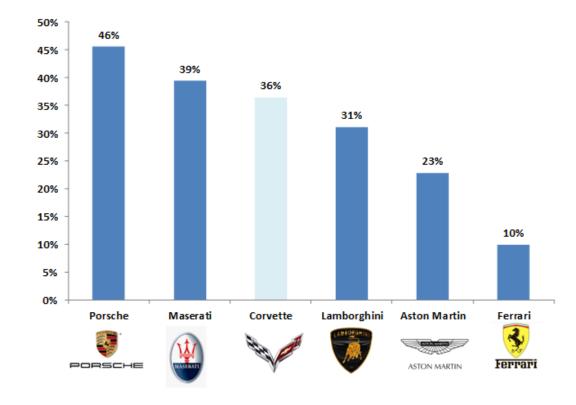

Exhibit 17: SUV as % of Units - 2024e

Source: IHS, Morgan Stanley Research. Note: we estimate RACE until 2022 and for exhibit purposes assume 10% by 2024.

Exhibit 18: SUV Release

OEM	Year Released/Expected
Ferrari	2022
Lamborghini	2018
Maserati	2016
Aston Martin	2020
Porsche	2002
Corvette	2024

Would an electric Corvette cannibalize Cadillac? If Corvette does decide to go with an SUV, we think GM will ensure it does not build an electric SUV before Cadillac builds an electric SUV, given Cadillac is the pillar of GM's electrification strategy and the core SUV brand. Doing so may hurt the Cadillac franchise. Also, given the 2020 Corvette is a midengine platform, in order to pivot to an electric SUV, Corvette would need to introduce an entirely new model into its platform as a mid-engine chassis does not lend itself to a BEV powertrain.

Could Corvette Stand Alone?

Following Ferrari's successful spin-off / separation from FCA in 2016, some investors may have considered similar moves by other OEMs in an attempt to highlight value through providing greater independence to specific businesses. We note we have no knowledge of anything related to a crystalization of value for Corvette and we discuss the reasons for and against Corvette standing alone as a hypothetical comparison to what other brands have done in the industry.

Benefits of being stand-alone:

- Liquidation provides a source of cash for GM.
- Dedicated management team and specific Corvette strategy ensures a focus of the Corvette brand.
- Allows value to be unlocked for GM shareholders, which otherwise the market is not giving credit for.
- GM could maintain equity in Corvette NewCo and continue to extract dividends.
- Corvette could still use GM's scale to ensure a cost competitive supply chain.

Benefits of remaining part of GM:

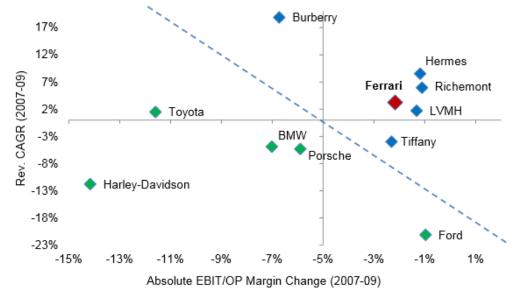

- A stand along Corvette could hurt Cadillac.
- Corvette provides diversification of GM away from light trucks (Silverado and GMC).
- GM could expand the Corvette brand under the existing GM umbrella to leverage its scale and be a more meaningful part of GM.
- Upside potential for a re-rate of GM stock as Corvette becomes a more meaningful portion of GM profitability.
- More scale where it matters (North America) and scale during downturn and EV build out phase.
- Brand enhancing to GM franchise as Corvette is American built that is synonymous with quality, and can appeal to younger generations.
- Corvette is capital light and not a drag on FCF.

A Point on Cyclicality...

 It is not clear how Corvette would fare as a stand alone brand during a downturn. According to IHS, between 2007 to 2009, Corvette sales dropped from 36.6k in 2007 to 7.3k in 2009 - a drop of 80%. This could be attributed to its high ASP price point without possessing the inelastic qualities that other supercar brands

such as Ferrari exemplify. By comparison, from the exhibit below, margins for HOG, Toyota, and BMW fell 14%, 12%, and 7%, respectively. We should also note that Toyota, BMW, and Ford all posted negative margins during the crisis. Even Porsche margins fell 6% from 2007-09. Meanwhile, Ferrari saw margins contract just 220bps over that period, very much in line with the minor margin deterioration experienced by luxury players like Tiffany, LVMH, Hermes, and Richemont. Ferrari shipments fell just 4% and revenues declined 7% between 2008-09 (yet captured a positive revenue CAGR of 3.2% from 2007-09). Ultimately we do not have enough history to ascertain how a stand alone Corvette brand could fare during a downturn, which is another potential reason against a stand-alone Corvette.

Source: Company Reports, Morgan Stanley Research

Bottom line: While there may be potential for value enhancement as a stand-alone entity, we don't view such a move as necessary for Corvette at this time and believe Corvette has substantial room to grow under the greater GM umbrella.

Corvette DCF

We have run a 10 year DCF to determine the valuation of the Corvette brand. The results are as follows:

- Bear Case: \$2bn. ~25k units by 2025, EBITDA margin of ~14%
- Base Case: \$7bn. ~74k units by 2025, EBITDA margin of ~19%
- Bull Case: \$12bn.~85k units by 2025, EBITDA margin of ~21%

DCF Assumptions:

- **EBITDA margins:** Rising to 16.5% in 2020 with the unveil of the 2020 Stingray. Exiting at 18.0% EBITDA margins in 2029 with \$1.6bn of EBITDA.
- **Unlevered FCF:** Slight burn in 2019 but rising over the course of the DCF to \$807mm in 2029
- **Debt free, cash free:** For modeling purpose we assume a clean capital structure with no leverage on Corvette and enterprise value = market cap
- WACC: Given we assume the company is unlevered, its cost of capital is equal to its cost of equity. We derived a cost of equity using CAPM from an adjusted beta of 1.25x, equity risk premium of 5.5% and a risk-free rate of 2.0% to get a cost of equity of 8.9%.
- **Terminal Growth Rate:** We assume a 0.50% terminal growth rate. Our implied terminal value EV/EBITDA multiple is 6.1x

IDEA

Exhibit 20: DCF

The valuation matrix below illustrates our Bull/Base/Bear cases.

• In our Base Case, \$7bn EV implies 10.4x 2021 EV/EBITDA and 6.8x EV/EBITDA in

2024. This equates to 19.2x 2021 PE and 12.2x 2024 PE.

- In our Bull Case, \$12bn EV implies Corvette re-rates higher to 17.8x 2021 EBITDA (11.7x 2024 EBIDTA) or 32.8x 2021 P/E (20.9x 2024 PE) closer to other premium supercar brands, yet still a discount, and assumed Corvette maintains robust unit growth and margins.
- Our **Bear Case** implies \$2bn value for Corvette, trading closer to GM's current multiple of ~3x fwd EBIDA, a PE of 5.5x in 2021.

Supercar Market Analysis

Ultra luxury sports cars have outperformed the broader global car market over the

past 10 years. We calculate a CAGR of 8.5% from 2011 to 2021e for luxury sports cars vs global passenger unit CAGR of 2.2%. We expect the growth of supercars to ramp over the next decade, driven by supercar brands venturing into new segments (SUVs), unveil of new models and technologies (Electric vehicles, hybrids) and grow organically their unit base as some become public enterprises and run more as long term profit centers.

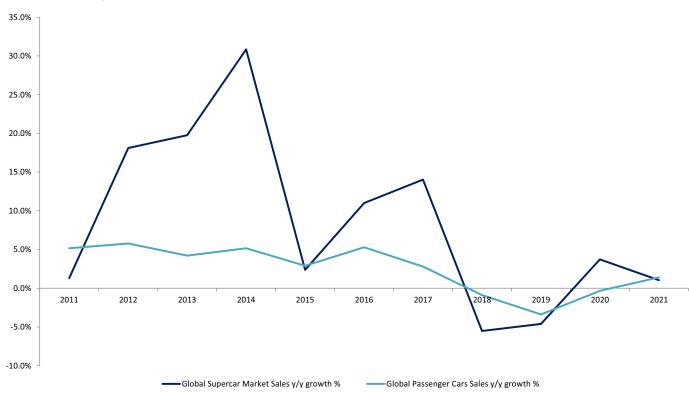

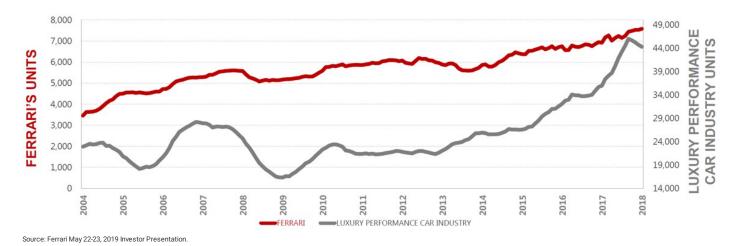

Exhibit 23: Global Supercar Growth vs Market

Source: Morgan Stanley Research (For global passenger cars), IHS (supercar forecast). To calculate the supercar market, we include total units from: Aston Martin, Bentley, Bugatti, Ferrari, Lamborghini, Maserati, McLaren, Porsche 911.

Using Ferrari's more niche definition of high performance luxury supercars, the supercar segment has grown at a CAGR of 24.7% over 14 years. Ferrari defines the high performance luxury segment as all two door GT and sports cars with power above 500hp, and retail price above €150,000. Units in this segment expanded from ~2,000 in 2004 to ~44,000 as of 2018...

IDEA

Exhibit 24: Global Ferrari Units vs Luxury High Performance Car Market Units

One of the largest luxury markets in the world, China, is a market that all luxury companies wish to expand into and excel in. Ferrari ships ~10% of cars to China, and will continue to be a source of growth over the next decade. Meanwhile the luxury brand Hermes generates ~54% of revenue in Asia (does not break out China). Corvette on the other hand, sells O units in China. The exhibit below illustrates the enormous growth of the Luxury sedan and luxury SUV market in China from 2004 to 2018, which could be a source of growth in the future.

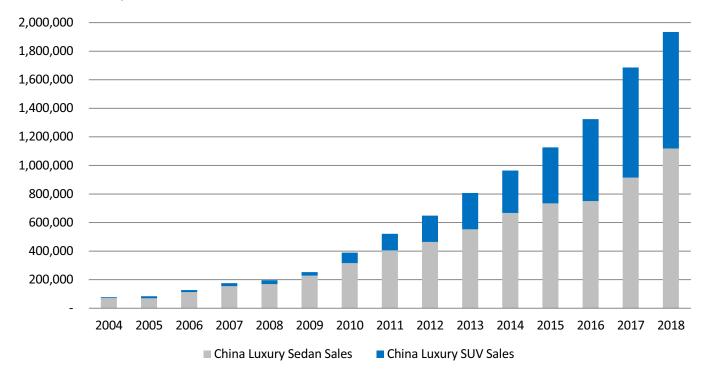

Exhibit 25: China Luxury Sedan/SUV Sales

Source: CPCA, Morgan Stanley Research Note: Luxury is defined as cars >300,000 RMB

Revenue: We assume Corvette units at 40k in 2020 vs. our Ferrari shipments at 10.7k and Aston Martin at ~7.8k units (based on Consensus from Visible Alpha). ASPs for Corvette is at \$82.5k, ¼ of Ferrari (\$350k) and ¼ of Aston Martin (\$223k).

Overall revenues for Corvette are at \$3.3bn, \$4.6bn for Ferrari and \$1.8bn for Aston Martin. Compared to IHS, we are taking a much more constructive view on the Corvette brand and market, especially as we factor the potential of an SUV launch in 2023/2024 and beyond.

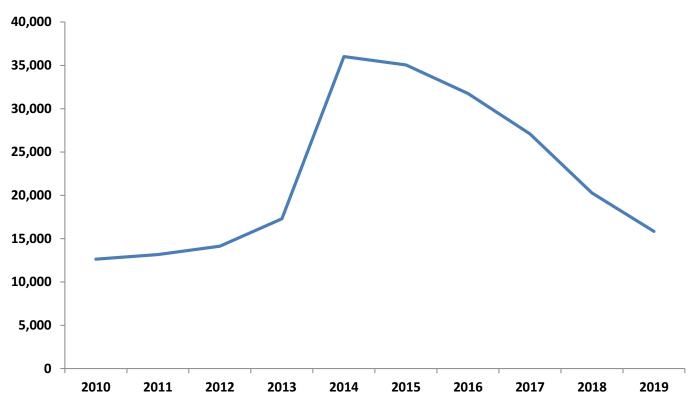

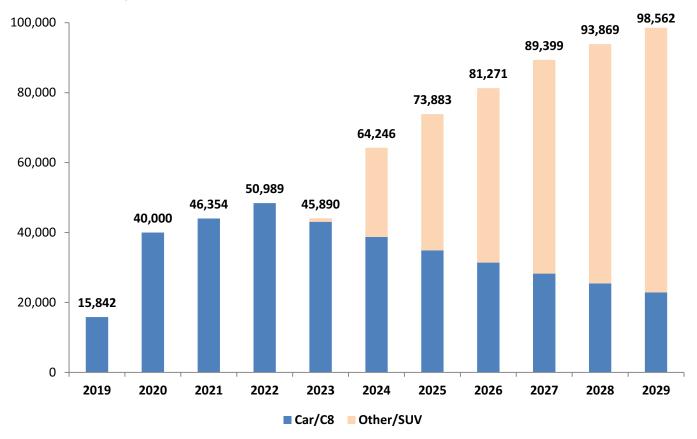

Exhibit 26: Corvette Units Over Time

Source: GM Authority, IHS for 2019

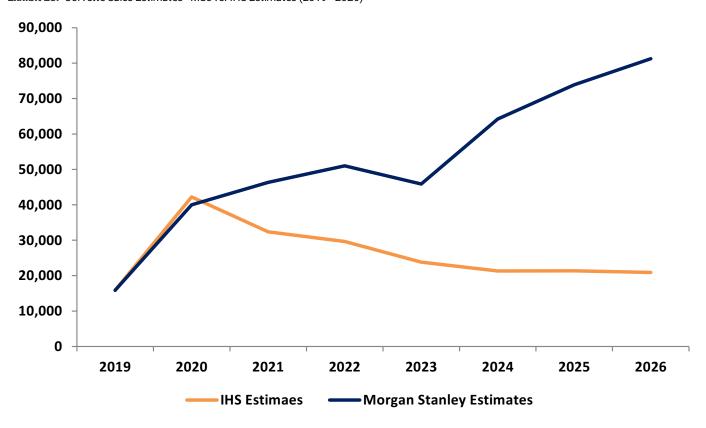

IDEA

Exhibit 27: Estimated Proportion of Unit Sales, Car vs. SUV

Source: Morgan Stanley Research from 2020 onwards, IHS for 2019 .

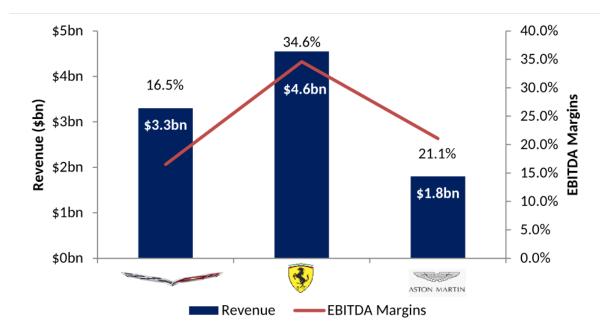

Exhibit 28: Corvette Sales Estimates - MSe vs. IHS Estimates (2019 - 2026)

Source: Morgan Stanley Research, IHS

- **EBITDA margins:** In 2020, we have Corvette EBITDA margins at 16.5%, below Ferrari's of 34.6% and Consensus assumes Aston at ~21.1%.
- **FCF:** In 2020, \$182mmm for Corvette, \$581mm for RACE and Consensus sees \$0mm of FCF for Aston Martin.

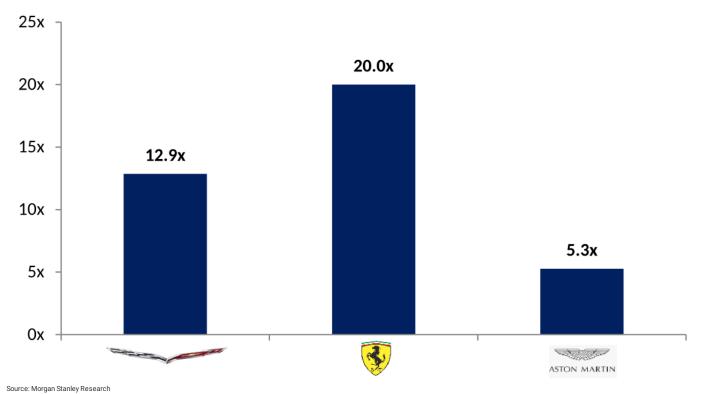

Exhibit 29: MS Estimates of Revenue & EBITDA Margins - 2020e

Source: Morgan Stanley Research for Corvette and Ferrari, Visible Alpha for Aston Martin

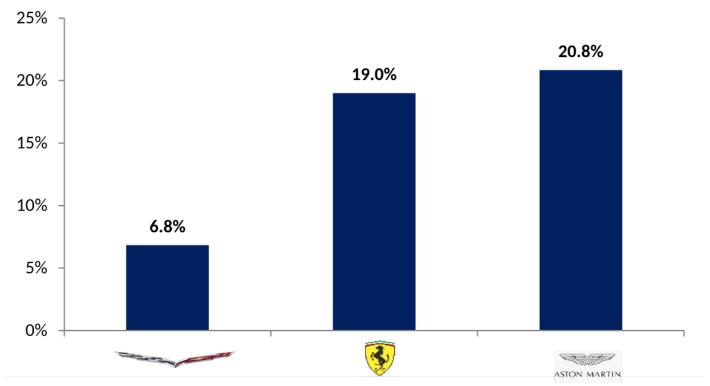

• Valuation Multiples: On our valuation of the Corvette brand, this implies a 2020 EV/EBITDA of 12.9x vs RACE at 20.0x, and Aston at 5.3x. A premium to Aston may be warranted given the strength of Corvette's proposed unlevered balanced sheet, but in our view a heavy discount to Ferrari is also appropriate given the strength of the Ferrari brand, in a league of its own and unmatched in terms of exclusivity, volume backlog, margins compared to any brand of car manufacturer.

Exhibit 30: 2020e EV/EBITDA multiple

- **Capital Intensity:** Corvette is the least capital intensive out of the group, partly due to its simple model line up. While we suspect capital expenditure investing with rise in the future, as a stand-alone brand we assume Corvette has 6.8% capex/sales vs. RACE at 19.0% and Aston at 20.8%.

Exhibit 31: Capital Intensity: FY20e Capex/Sales

GM SOTP inc. Corvette

In our GM SOTP, which we use to get to our Bull Case on GM, we incorporate a \$2bn valuation of Corvette (\$2bn is our Corvette Bear Case using our DCF derived valuation of Corvette), which leads to a Bull Case of GM of \$57/share. The exhibit below illustrates the effect on our SOTP from a crystallization of value standpoint for Corvette. On our calculation, each \$1bn of value of Corvette is worth around \$0.70 of GM share price value.

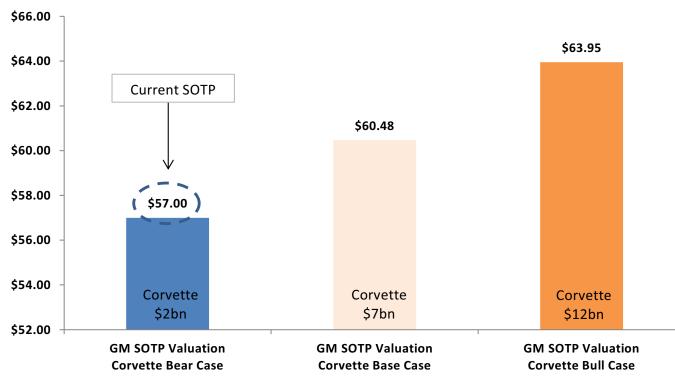

Exhibit 33: Corvette's Valuation Bull/Bear/Base on GM SOTP

Source: Morgan Stanley Research

Below we show the effect of cash proceeds from Corvette to GM, assuming a reduction of EBITDA by \$0.8bn. We assume crystallizing value from Corvette would be accretive to GM given it would extract value for an asset trading at ~19x 2021 P/E vs GM at ~8x. All things equal while Enterprise value drops assuming a constant multiple and drop in EBITDA, we believe the market would look to buy GM as this additional cash would further strengthen its balance sheet and there would be optionality for the cash to be used for dividends or buybacks.

Exhibit 34: Pre and Post GM With Corvette Spin Out

2022e (\$bn)	GM	*GM ex Corvette			
EV/EBITDA	3.05x	3.05x			
EBITDA	17.0	16.2			
Enterprise Value	51.9	49.5			
Market Cap	55.5	60.1			

Source: Morgan Stanley Research, *Assumes \$7bn of cash proceeds added to Market Cap from net cash of \$3.6bn rising by \$7.0bn, using DCF derived Base Case of Corvette.

FCA & Ferrari Case Study

FCA spun off Ferrari on January 3, 2016. RACE's market cap at spin was ~€8.5bn and today is ~235% higher at ~€28.5bn. Meanwhile FCA's market cap in 12/1/2015 was ~€17bn and today sits only 30% higher at ~€22bn. Overall we believe it was a very successful deal as FCA was manage to successfully unlock value for FCA shareholders and subsequently allowed Ferrari to focus on a dedicated strategy that was not hindered by FCA as an enterprise.

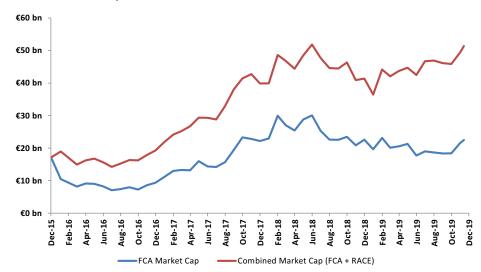

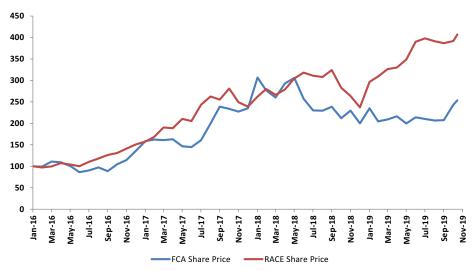

Exhibit 36: Market Cap: FCA vs Combined FCA + RACE

Source: Thomson Reuters. Starting point 12/1/15

Source: Thomson Reuters. FCA Share Price starting point at 1/4/16, after RACE spin.

Important US Regulatory Disclosures on Subject Companies

As of October 31, 2019, Morgan Stanley beneficially owned 1% or more of a class of common equity securities of the following companies covered in Morgan Stanley Research: American Axle & Manufacturing Holdings Inc, Asbury Automotive Group Inc, Carvana Co, Fiat Chrysler Automobiles NV, Garrett Motion Inc, Group 1 Automotive, Inc, Hertz Global Holdings Inc, Lithia Motors Inc., Penske Automotive Group, Inc, Tesla Inc, Visteon Corporation. Within the last 12 months, Morgan Stanley managed or co-managed a public offering (or 144A offering) of securities of Avis Budget Group Inc, Ford Motor Company, General Motors Company, Tesla Inc.

Within the last 12 months, Morgan Stanley has received compensation for investment banking services from Avis Budget Group Inc, Ferrari NV, Ford Motor Company, General Motors Company, Penske Automotive Group, Inc, Tesla Inc.

In the next 3 months, Morgan Stanley expects to receive or intends to seek compensation for investment banking services from American Axle & Manufacturing Holdings Inc, Aptiv PIc, Avis Budget Group Inc, BorgWarner Inc., Delphi Technologies PLC, Ferrari NV, Fiat Chrysler Automobiles NV, Ford Motor Company, Garrett Motion Inc, General Motors Company, Goodyear Tire & Rubber Company, Group 1 Automotive, Inc, Harley-Davidson Inc, Lear Corporation, Magna International Inc., Tenneco Inc., Tesla Inc, Visteon Corporation.

Within the last 12 months, Morgan Stanley has received compensation for products and services other than investment banking services from American Axle & Manufacturing Holdings Inc, Aptiv Plc, Avis Budget Group Inc, BorgWarner Inc., Ferrari NV, Fiat Chrysler Automobiles NV, Ford Motor Company, General Motors Company, Goodyear Tire & Rubber Company, Harley-Davidson Inc, Lear Corporation, Tenneco Inc., Visteon Corporation.

Within the last 12 months, Morgan Stanley has provided or is providing investment banking services to, or has an investment banking client relationship with, the following company: American Axle & Manufacturing Holdings Inc, Aptiv Plc, Avis Budget Group Inc, BorgWamer Inc., Delphi Technologies PLC, Ferrari NV, Fiat Chrysler Automobiles NV, Ford Motor Company, Garrett Motion Inc, **General Motors Company**, Goodyear Tire & Rubber Company, Group 1 Automotive, Inc, Harley-Davidson Inc, Lear Corporation, Magna International Inc., Penske Automotive Group, Inc, Tenneco Inc., Tesla Inc, Visteon Corporation. Within the last 12 months, Morgan Stanley has either provided or is providing non-investment banking, securities-related services to and/or in the past has entered into an agreement to provide services or has a client relationship with the following company: American Axle & Manufacturing Holdings Inc, Aptiv Plc, Avis Budget Group Inc, BorgWamer Inc., Ferrari NV, Fiat Chrysler Automobiles NV, Ford Motor Company, Goodyear Tire & Rubber Company, Goodyear Tire & Rubber Company, Harley-Davidson Inc, Lear Corporation, Sonic Automobiles NV, Ford Motor Company, General Motors Company, Goodyear Tire & Rubber Company, Harley-Davidson Inc, Lear Corporation, Sonic Automobiles NV, Ford Motor Company, General Motors Company, Goodyear Tire & Rubber Company, Harley-Davidson Inc, Lear Corporation, Sonic Automobiles NV, Ford Motor Company, General Motors Company, Goodyear Tire & Rubber Company, Harley-Davidson Inc, Lear Corporation, Sonic Automobiles NV, Ford Motor Company, Orporation.

An employee, director or consultant of Morgan Stanley is a director of **General Motors Company**. This person is not a research analyst or a member of a research analyst's household.

Morgan Stanley & Co. LLC makes a market in the securities of American Axle & Manufacturing Holdings Inc, Aptiv Plc, Asbury Automotive Group Inc, AutoNation Inc., Avis Budget Group Inc, BorgWarner Inc., Carmax Inc, Delphi Technologies PLC, Ferrari NV, Fiat Chrysler Automobiles NV, Ford Motor Company, **General Motors Company**, Goodyear Tire & Rubber Company, Group 1 Automotive, Inc, Harley-Davidson Inc, Lear Corporation, Lithia Motors Inc., Magna International Inc., Penske Automotive Group, Inc, Sonic Automotive Inc, Tenneco Inc., Tesla Inc, Visteon Corporation.

The equity research analysts or strategists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality of research, investor client feedback, stock picking, competitive factors, firm revenues and overall investment banking revenues. Equity Research analysts' or strategists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

Morgan Stanley and its affiliates do business that relates to companies/instruments covered in Morgan Stanley Research, including market making, providing liquidity, fund management, commercial banking, extension of credit, investment services and investment banking. Morgan Stanley sells to and buys from customers the securities/instruments of companies covered in Morgan Stanley Research on a principal basis. Morgan Stanley may have a position in the debt of the Company or instruments discussed in this report. Morgan Stanley trades or may trade as principal in the debt securities (or in related derivatives) that are the subject of the debt research report.

Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of October 31, 2019)

The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm. For disclosure purposes only (in accordance with NASD and NYSE requirements), we include the category headings of Buy, Hold, and Sell alongside our

ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.

	COVERAGE UI	NIVERSE	INVESTMEN	IT BANKING CLI	OTHER MATERIAL INVESTMENT SERVICES CLIENTS (MISC)		
STOCK RATING	COUNT	% OF	COUNT	% OF	% OF	COUNT	% OF

Underweight/Sell	568	18%	77	12%	14%	229	16%
TOTAL	3,168		668			1439	

Data include common stock and ADRs currently assigned ratings. Investment Banking Clients are companies from whom Morgan Stanley received investment banking compensation in the last 12 months. Due to rounding off of decimals, the percentages provided in the "% of total" column may not add up to exactly 100 percent.

Analyst Stock Ratings

Overweight (O). The stock's total return is expected to exceed the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Equal-weight (E). The stock's total return is expected to be in line with the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Not-Rated (NR). Currently the analyst does not have adequate conviction about the stock's total return relative to the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Underweight (U). The stock's total return is expected to be below the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Unless otherwise specified, the time frame for price targets included in Morgan Stanley Research is 12 to 18 months.

Analyst Industry Views

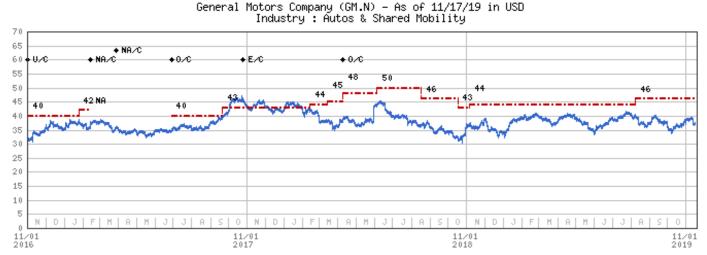

Attractive (A): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be attractive vs. the relevant broad market benchmark, as indicated below.

International PLC and its affiliates have a significant financial interest in the debt securities of Aptiv Plc, AutoNation Inc., Avis Budget Group Inc, BorgWarner Inc., Fiat Chrysler Automobiles NV, Ford Motor Company, **General Motors Company**, Goodyear Tire & Rubber Company, Lear Corporation, Tenneco Inc., Tesla Inc.

Morgan Stanley Research policy is to update research reports as and when the Research Analyst and Research Management deem appropriate, based on developments with the issuer, the sector, or the market that may have a material impact on the research views or opinions stated therein. In addition, certain Research publications are intended to be updated on a regular periodic basis (weekly/monthly/quarterly/annual) and will ordinarily be updated with that frequency, unless the Research Analyst and Research Management determine that a different publication schedule is appropriate based on current conditions. Morgan Stanley is not acting as a municipal advisor and the opinions or views contained herein are not intended to be, and do not constitute, advice within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act.

Morgan Stanley produces an equity research product called a "Tactical Idea." Views contained in a "Tactical Idea" on a particular stock may be contrary to the recommendations or views expressed in research on the same stock. This may be the result of differing time horizons, methodologies, market events, or other factors. For all research available on a particular stock, please contact your sales representative or go to Matrix at http://www.morganstanley.com/matrix. Morgan Stanley Research is provided to our clients through our proprietary research portal on Matrix and also distributed electronically by Morgan Stanley to

clients. Certain, but not all, Morgan Stanley Research products are also made available to clients through third-party vendors or redistributed to clients through alternate electronic means as a convenience. For access to all available Morgan Stanley Research, please contact your sales representative or go to Matrix at http://www.morganstanley.com/matrix.

(http://www.morganstanley.com/terms.html). In addition you consent to Morgan Stanley processing your personal data and using cookies in accordance with our Privacy Policy and our Global Cookies Policy (http://www.morganstanley.com/privacy_pledge.html), including for the purposes of setting your preferences and to collect readership data so that we can deliver better and more personalized service and products to you. To find out more information about how Morgan Stanley processes personal data, how we use cookies and how to reject cookies see our Privacy Policy and our Global Cookies Policy (http://www.morganstanley.com/privacy_pledge.html).

If you do not agree to our Terms of Use and/or if you do not wish to provide your consent to Morgan Stanley processing your personal data or using cookies please do not access our research.

Morgan Stanley Research does not provide individually tailored investment advice. Morgan Stanley Research has been prepared without regard to the circumstances and objectives of those who receive it. Morgan Stanley recommends that investors independently evaluate particular investments and strategies, and encourages investors to seek the advice of a financial adviser. The appropriateness of an investment or strategy will depend on an investor's circumstances and objectives. The securities, instruments, or strategies discussed in Morgan Stanley Research may not be suitable for all investors, and certain investors may not be eligible to purchase or participate in some or all of them. Morgan Stanley Research is not an offer to buy or sell or the solicitation

42

IDEA

of an offer to buy or sell any security/instrument or to participate in any particular trading strategy. The value of and income from your investments may vary because of changes in interest rates, foreign exchange rates, default rates, prepayment rates, securities/instruments prices, market indexes, operational or financial conditions of companies or other factors. There may be time limitations on the exercise of options or other rights in securities/instruments transactions. Past performance is not necessarily a guide to future performance. Estimates of future performance are based on assumptions that may not be realized. If provided, and unless otherwise stated, the closing price on the cover page is that of the primary exchange for the subject company's securities/instruments.

The fixed income research analysts, strategists or economists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality, accuracy and value of research, firm profitability or revenues (which include fixed income trading and capital markets profitability or revenues), client feedback and competitive factors. Fixed Income Research analysts', strategists' or economists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

The "Important US Regulatory Disclosures on Subject Companies" section in Morgan Stanley Research lists all companies mentioned where Morgan Stanley owns 1% or more of a class of common equity securities of the companies. For all other companies mentioned in Morgan Stanley Research, Morgan Stanley may have an investment of less than 1% in securities/instruments or derivatives of securities/instruments of companies and may trade them in ways different from those discussed in Morgan Stanley Research. Employees of Morgan Stanley not involved in the preparation of Morgan Stanley Research may have investments in securities/instruments or derivatives of companies mentioned and may trade them in ways different from those discussed in Morgan Stanley Research. Derivatives may be issued by Morgan Stanley or associated persons.

With the exception of information regarding Morgan Stanley, Morgan Stanley Research is based on public information. Morgan Stanley makes every effort to use reliable, comprehensive information, but we make no representation that it is accurate or complete. We have no obligation to tell you when opinions or information in Morgan Stanley Research change apart from when we intend to discontinue equity research coverage of a subject company. Facts and views presented in Morgan Stanley Research have not been reviewed by, and may not reflect information known to, professionals in other Morgan Stanley business areas, including investment banking personnel.

Morgan Stanley Research personnel may participate in company events such as site visits and are generally prohibited from accepting payment by the company of associated expenses unless pre-approved by authorized members of Research management.

Morgan Stanley may make investment decisions that are inconsistent with the recommendations or views in this report.

To our readers based in Taiwan or trading in Taiwan securities/instruments: Information on securities/instruments that trade in Taiwan is distributed by Morgan Stanley Taiwan Limited ("MSTL"). Such information is for your reference only. The reader should independently evaluate the investment risks and is solely responsible for their investment decisions. Morgan Stanley Research may not be distributed to the public media or quoted or used by the public media without the express written consent of Morgan Stanley. Any non-customer reader within the scope of Article 7-1 of the Taiwan Stock Exchange Recommendation Regulations accessing and/or receiving Morgan Stanley Research is not permitted to provide Morgan Stanley Research to any third party (including but not limited to related parties, affiliated companies and any other third parties) or engage in any activities regarding Morgan Stanley Research which may create or give the appearance of creating a conflict of interest. Information on securities/instruments that do not trade in Taiwan is for informational purposes only and is not to be construed as a recommendation or a solicitation to trade in such securities/instruments. MSTL may not execute transactions for clients in these securities/instruments.
